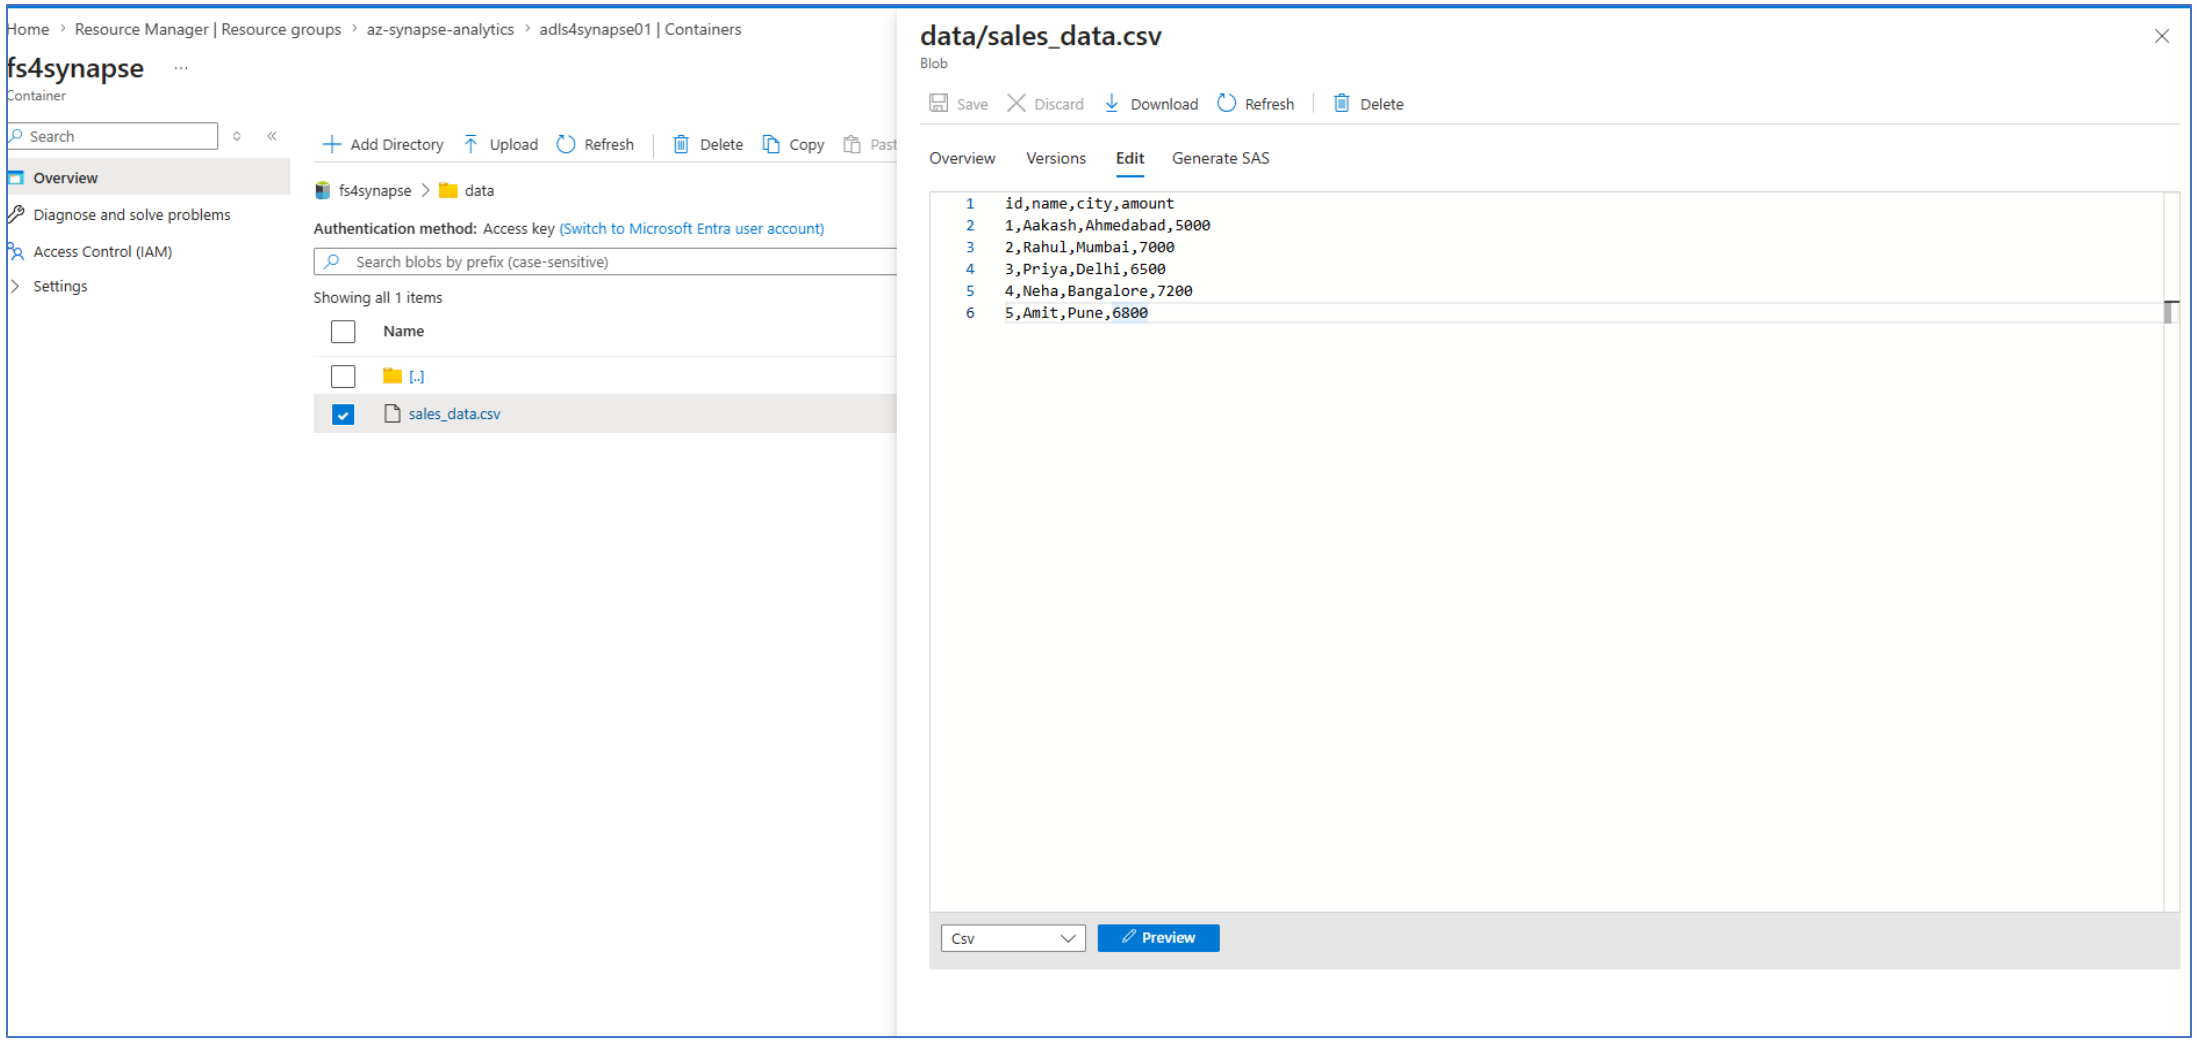
External Table

Name: Sumit Chauhan

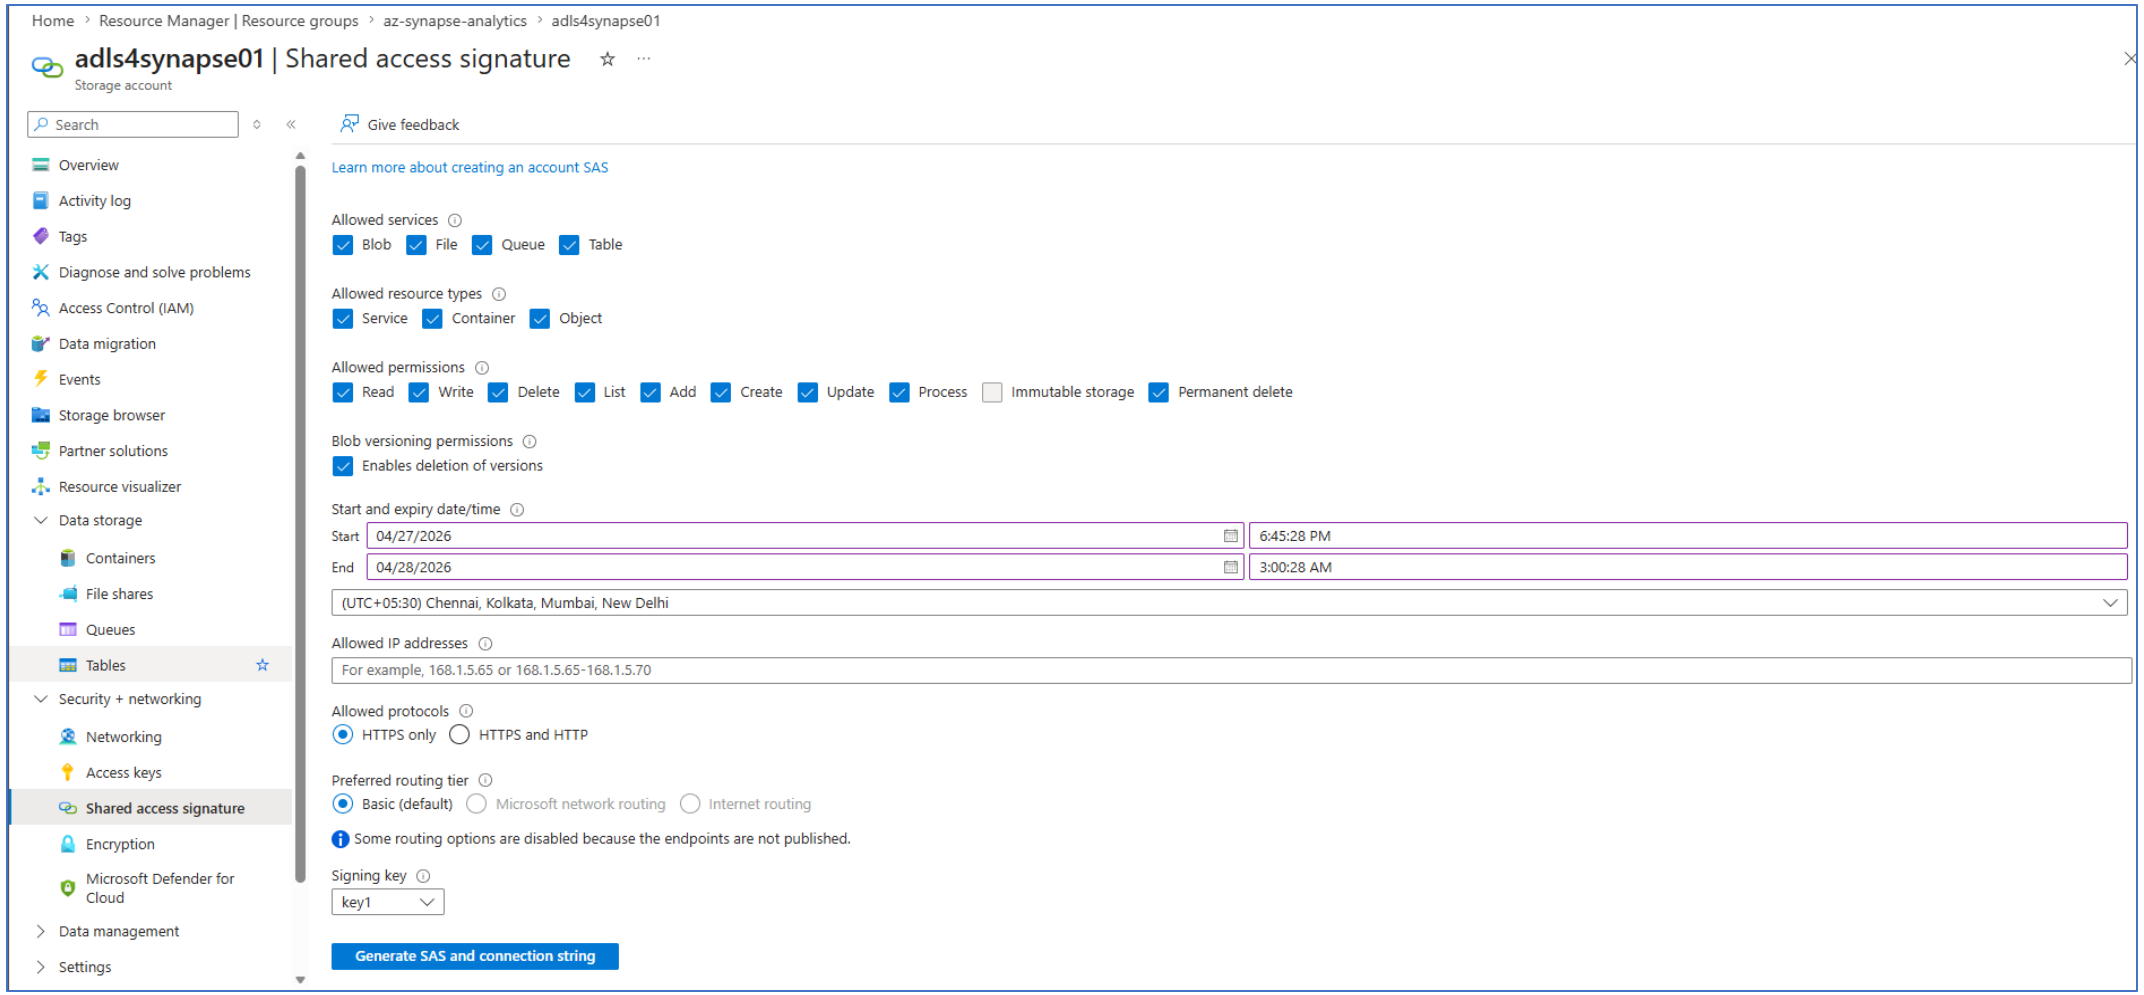
Dept: Data Engineering

- Task: Create an external data source in Azure Synapse Analytics to connect to an Azure Data Lake Storage (ADLS) Gen2 account using SQL.
- Define an external file format for CSV files stored in ADLS, specifying the delimiter and other relevant format properties (e.g., field terminator, string delimiter).
- Create an external table in Synapse referencing a specific CSV file stored in ADLS. Use the external data source and file format you defined in the previous tasks.

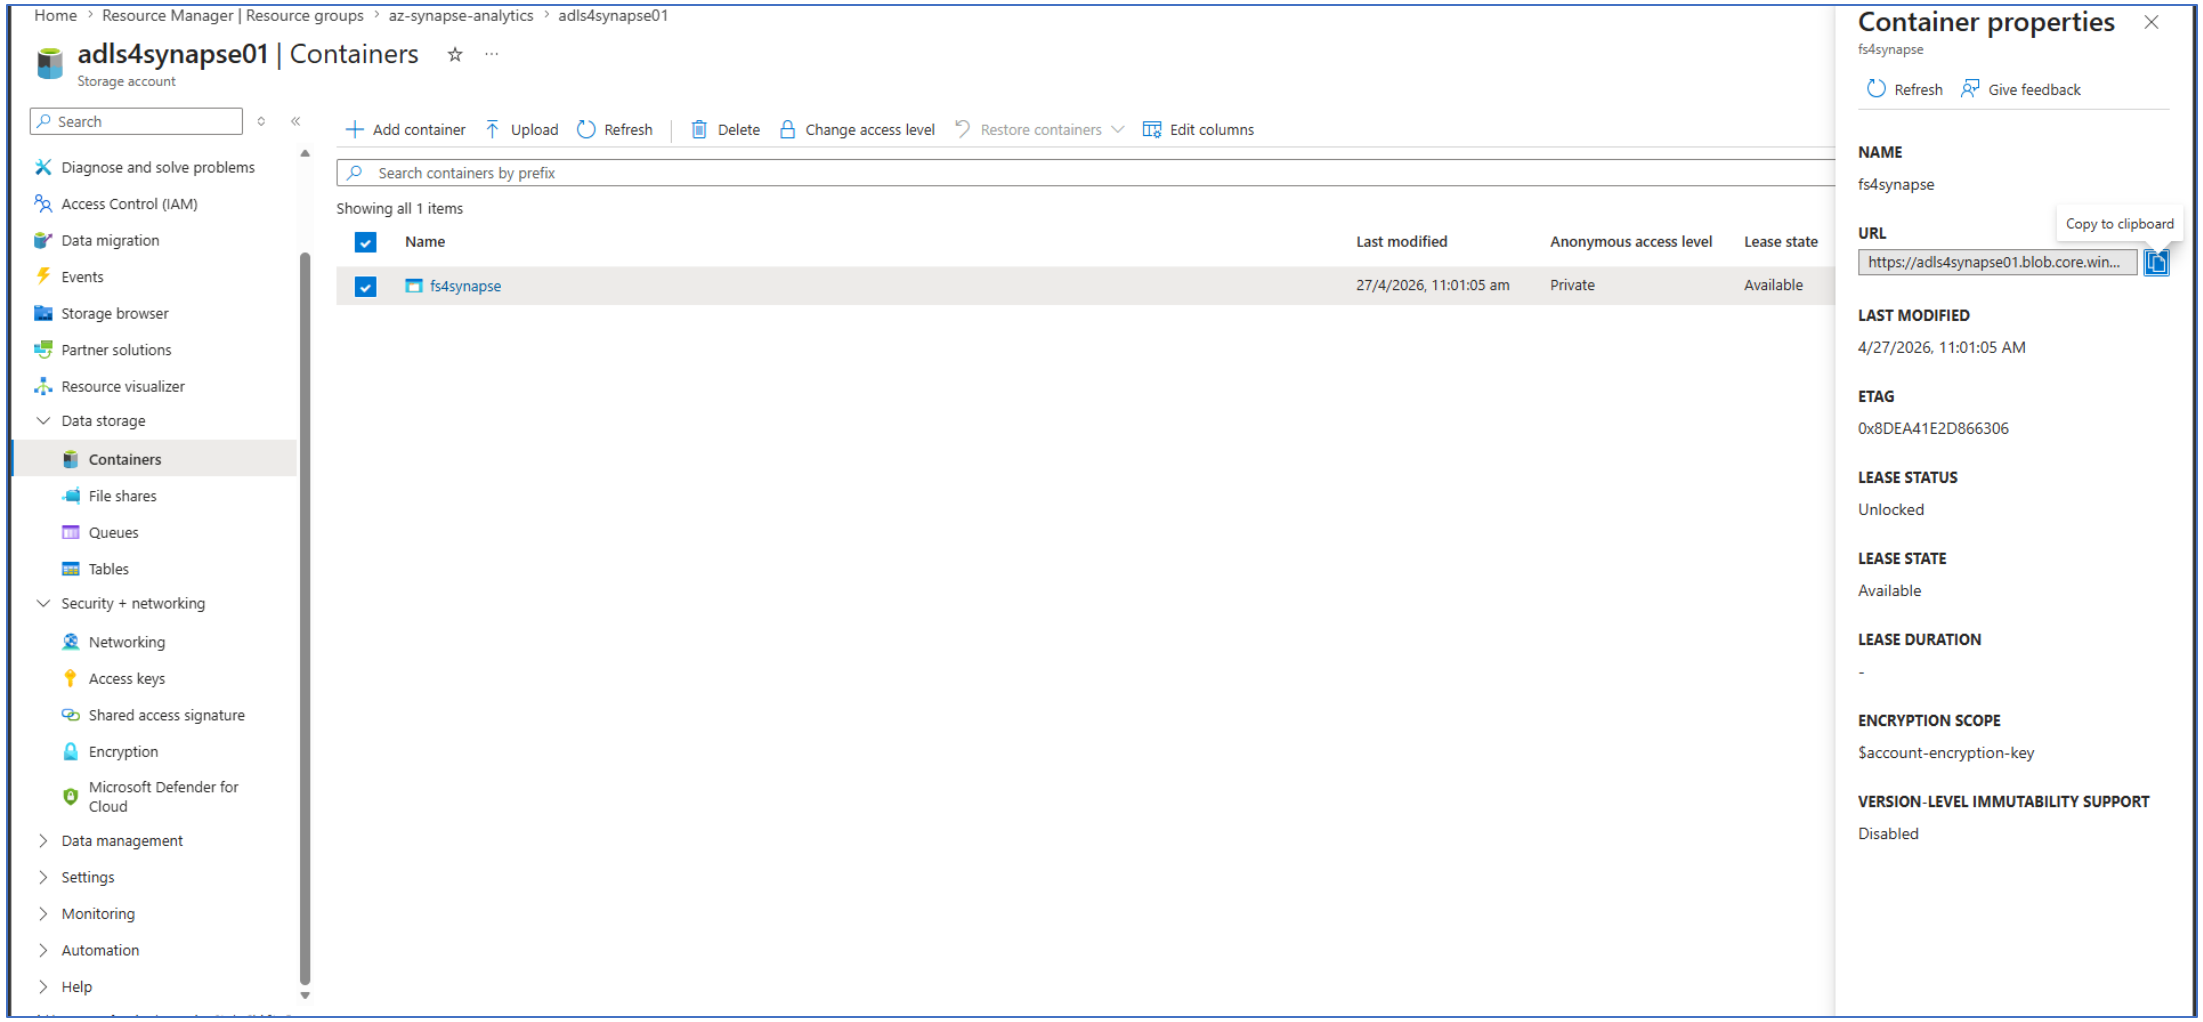
Create csv file inside container



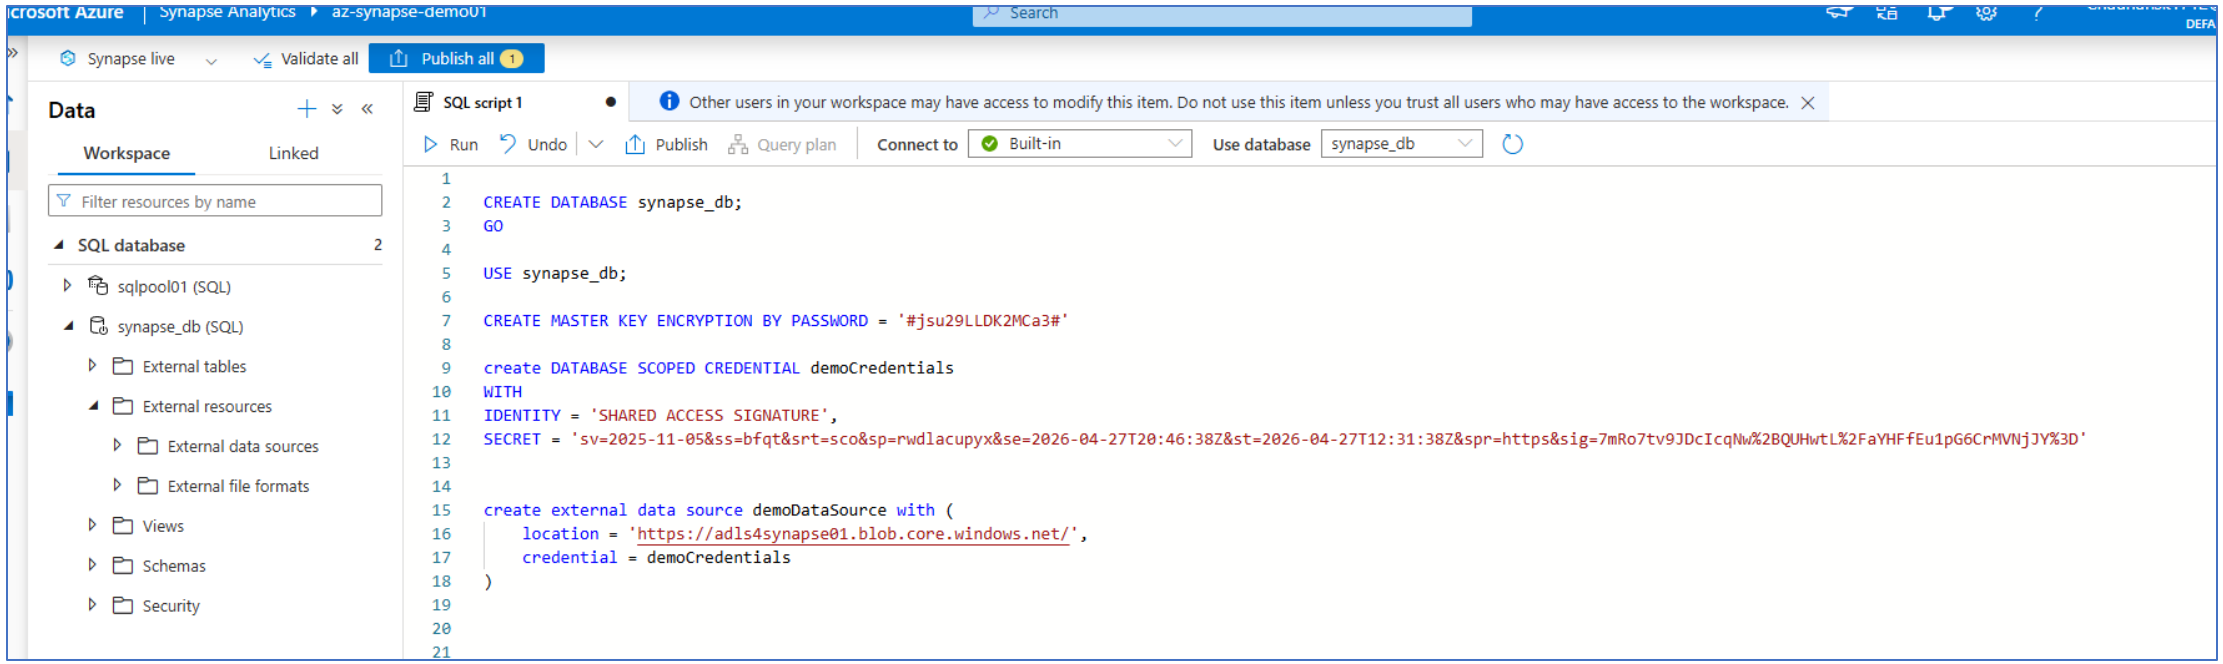
In your storage account, generate SAS



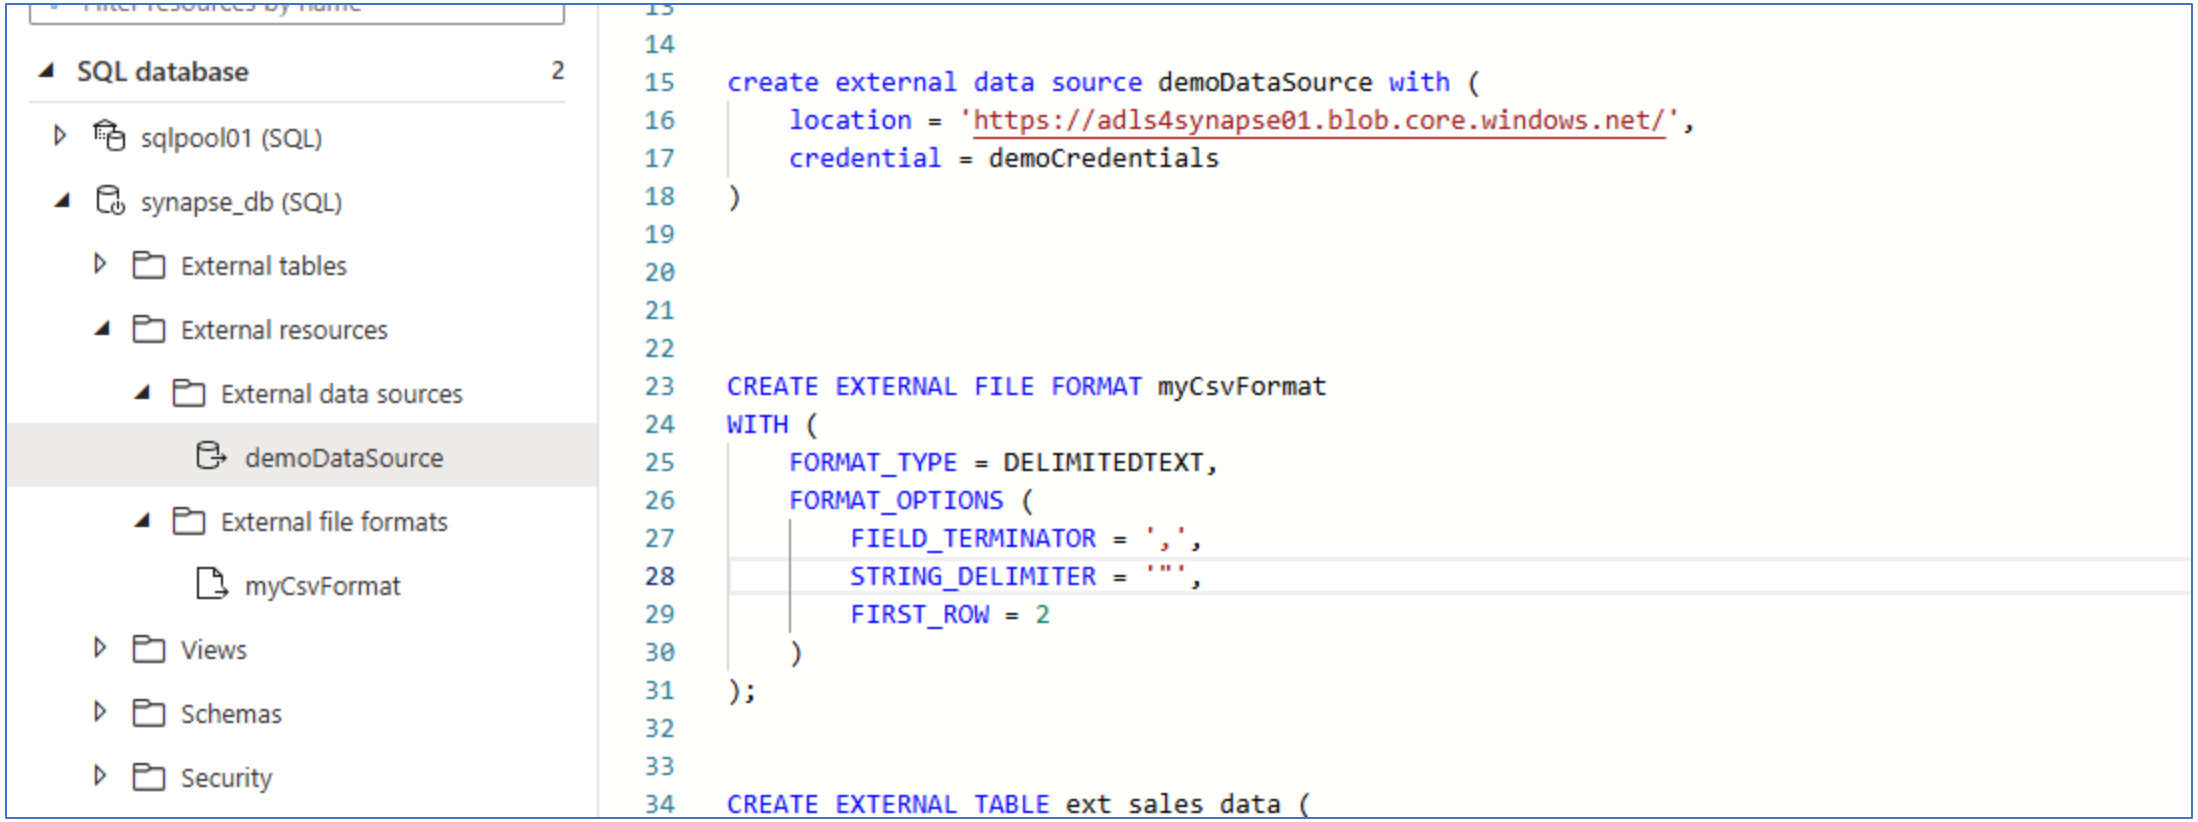
Copy the container URL

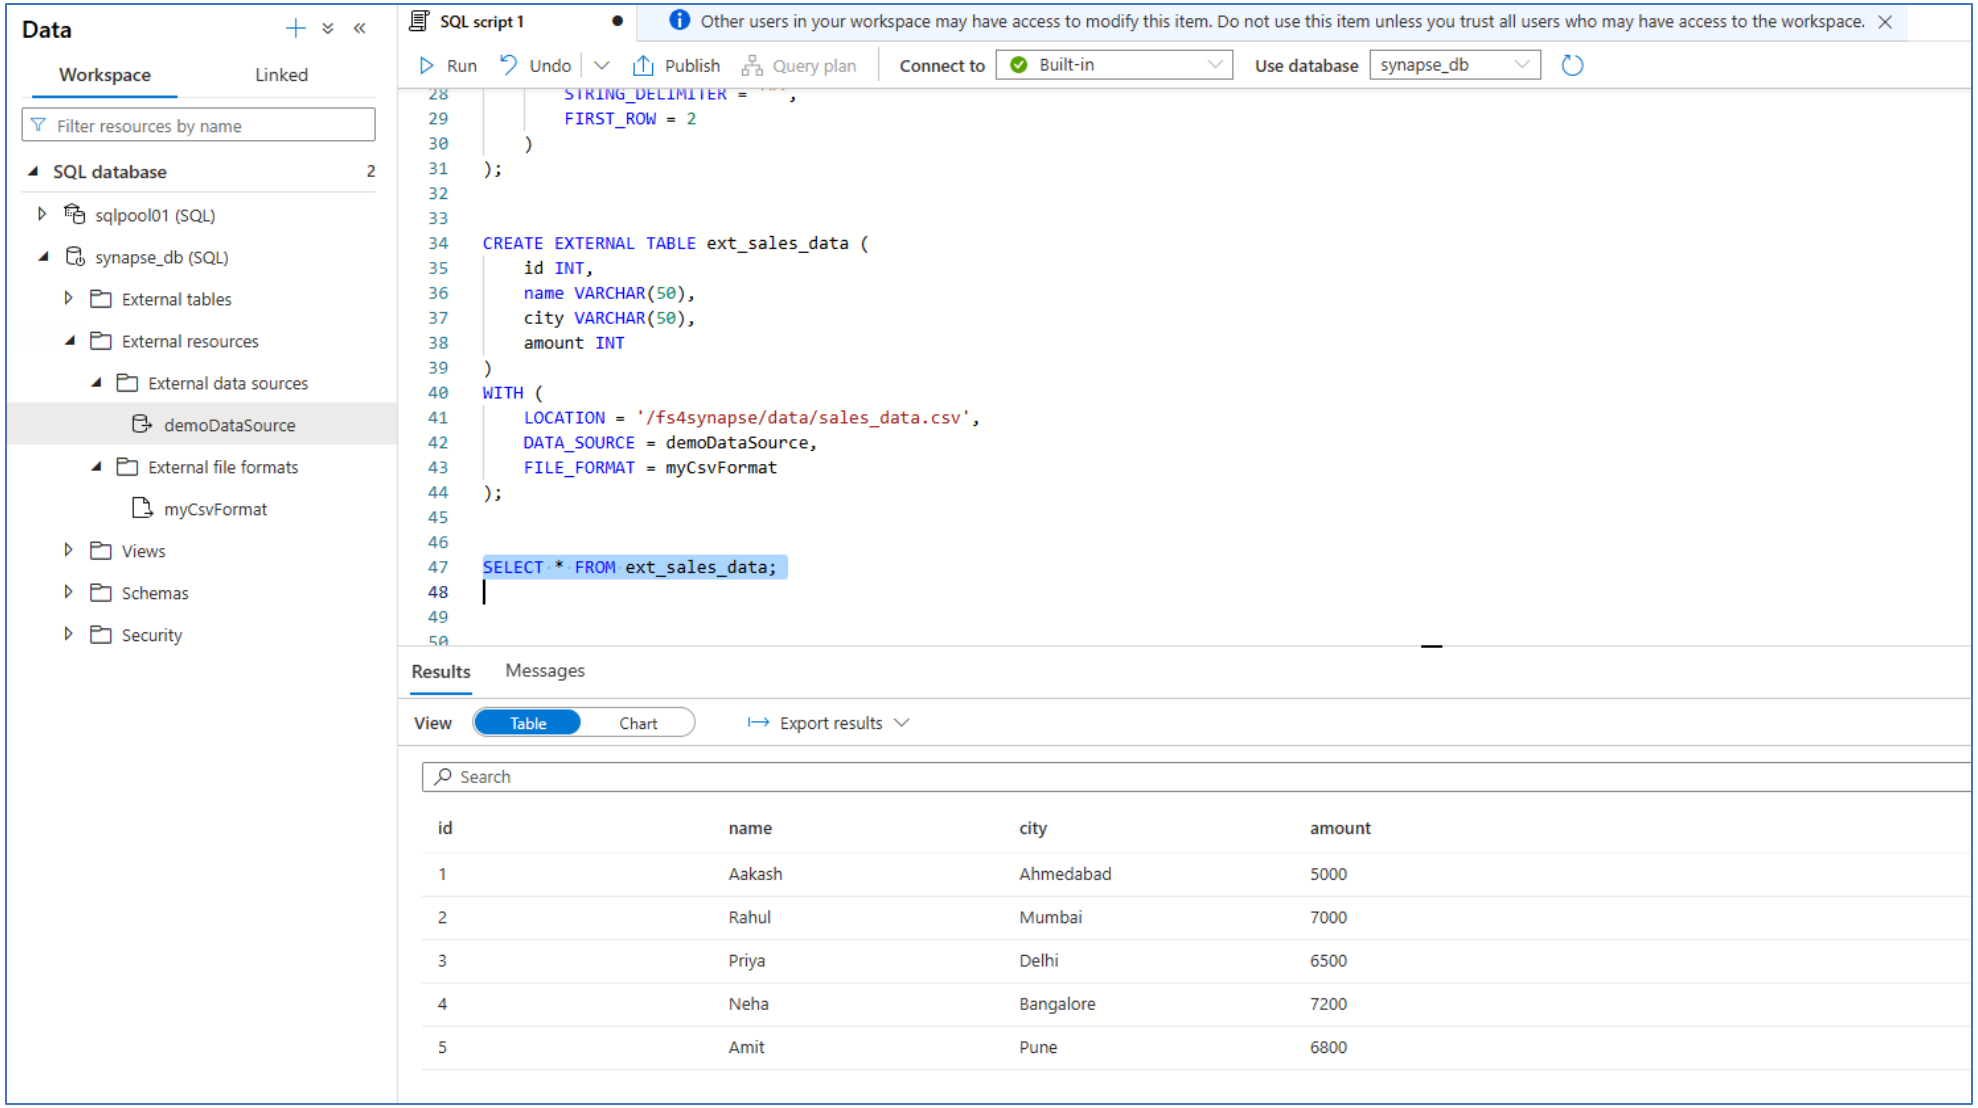


Create an external data source in Azure Synapse Analytics to connect to an Azure Data Lake Storage (ADLS) Gen2 account using SQL.



Define an external file format for CSV files stored in ADLS, specifying the delimiter and other relevant format properties (e.g., field terminator, string delimiter).





Create an external table in Synapse referencing a specific CSV file stored in ADLS. Use the external data source and file format you defined in the previous tasks.
