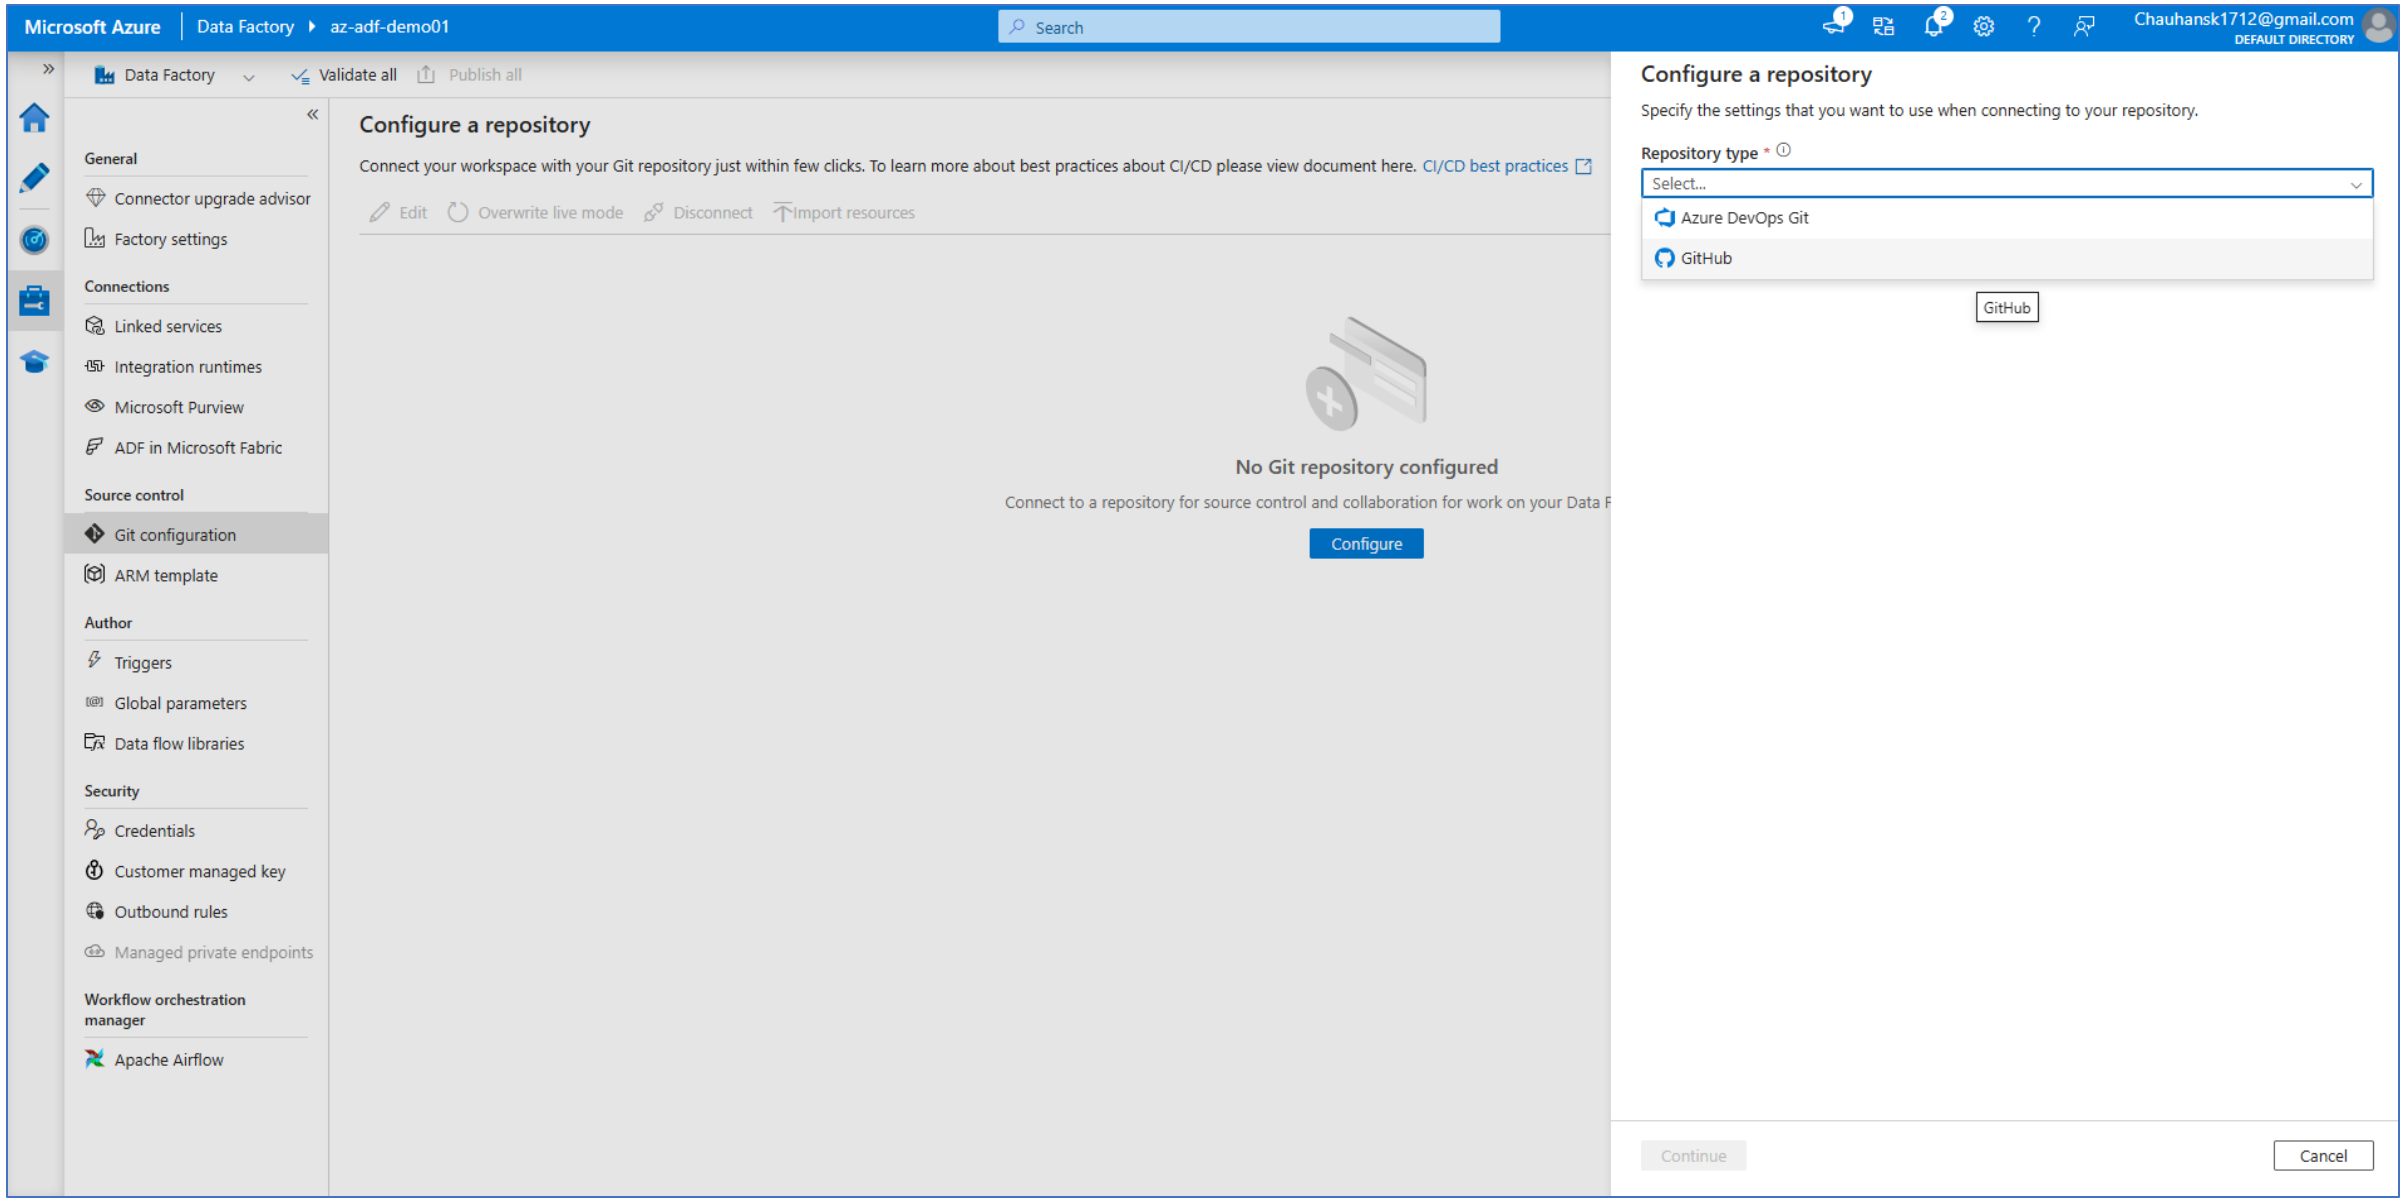
Step 2: In ADF, navigate to the Manage section and connect to GitHub under the Git configuration.



Configure details

Configure a repository

Specify the settings that you want to use when connecting to your repository.

For GitHub integration, you should authorize AzureDataFactory OAuth app that acts on behalf of user to connect to all repositories that user has access to. Learn more

Repository type *

GitHub

☐ Use GitHub Enterprise Server

GitHub repository owner *

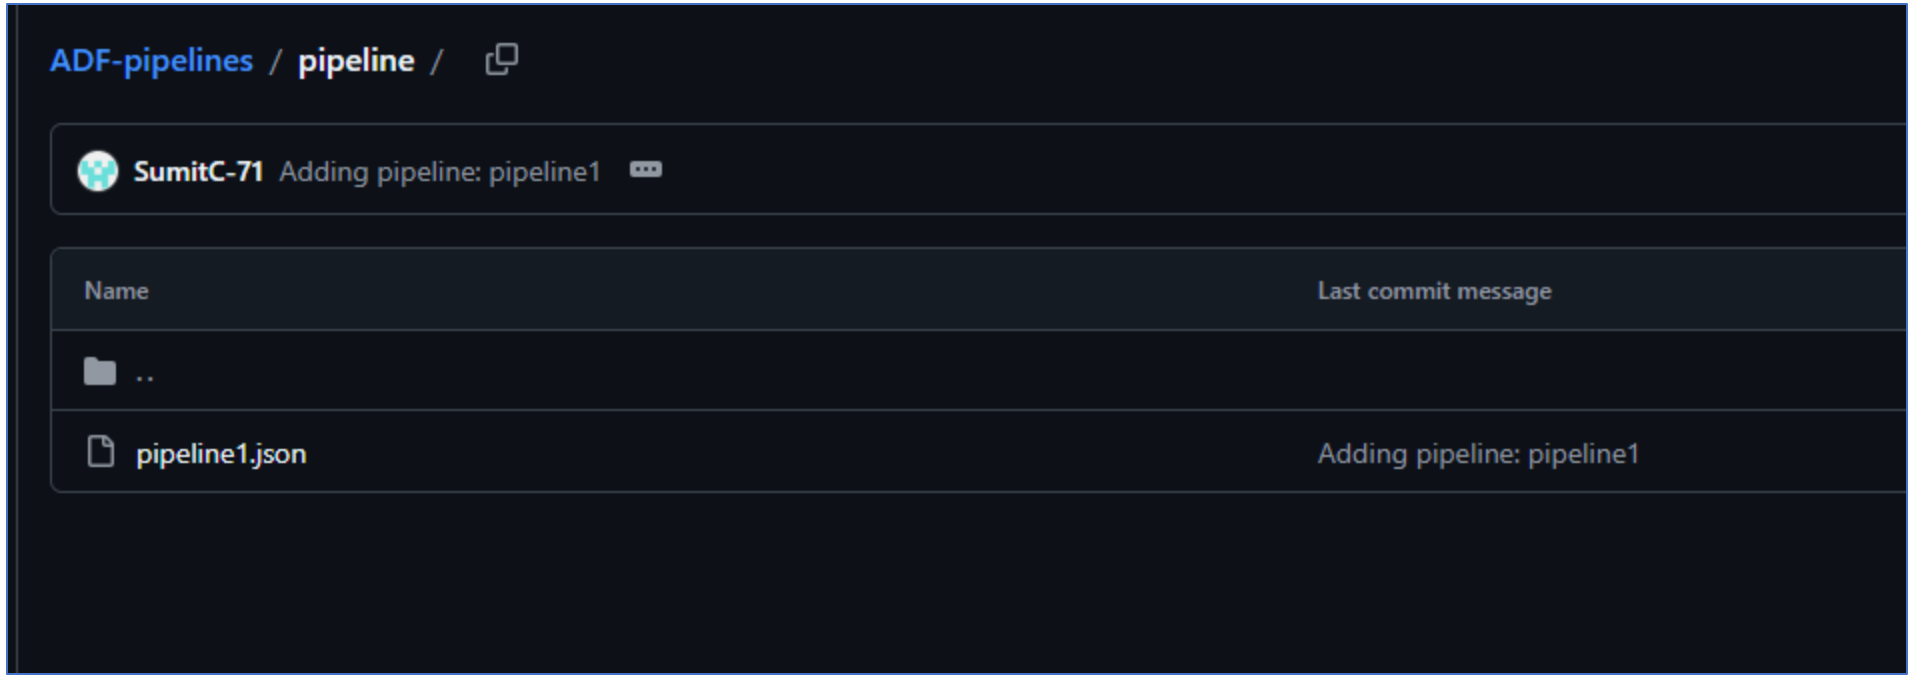
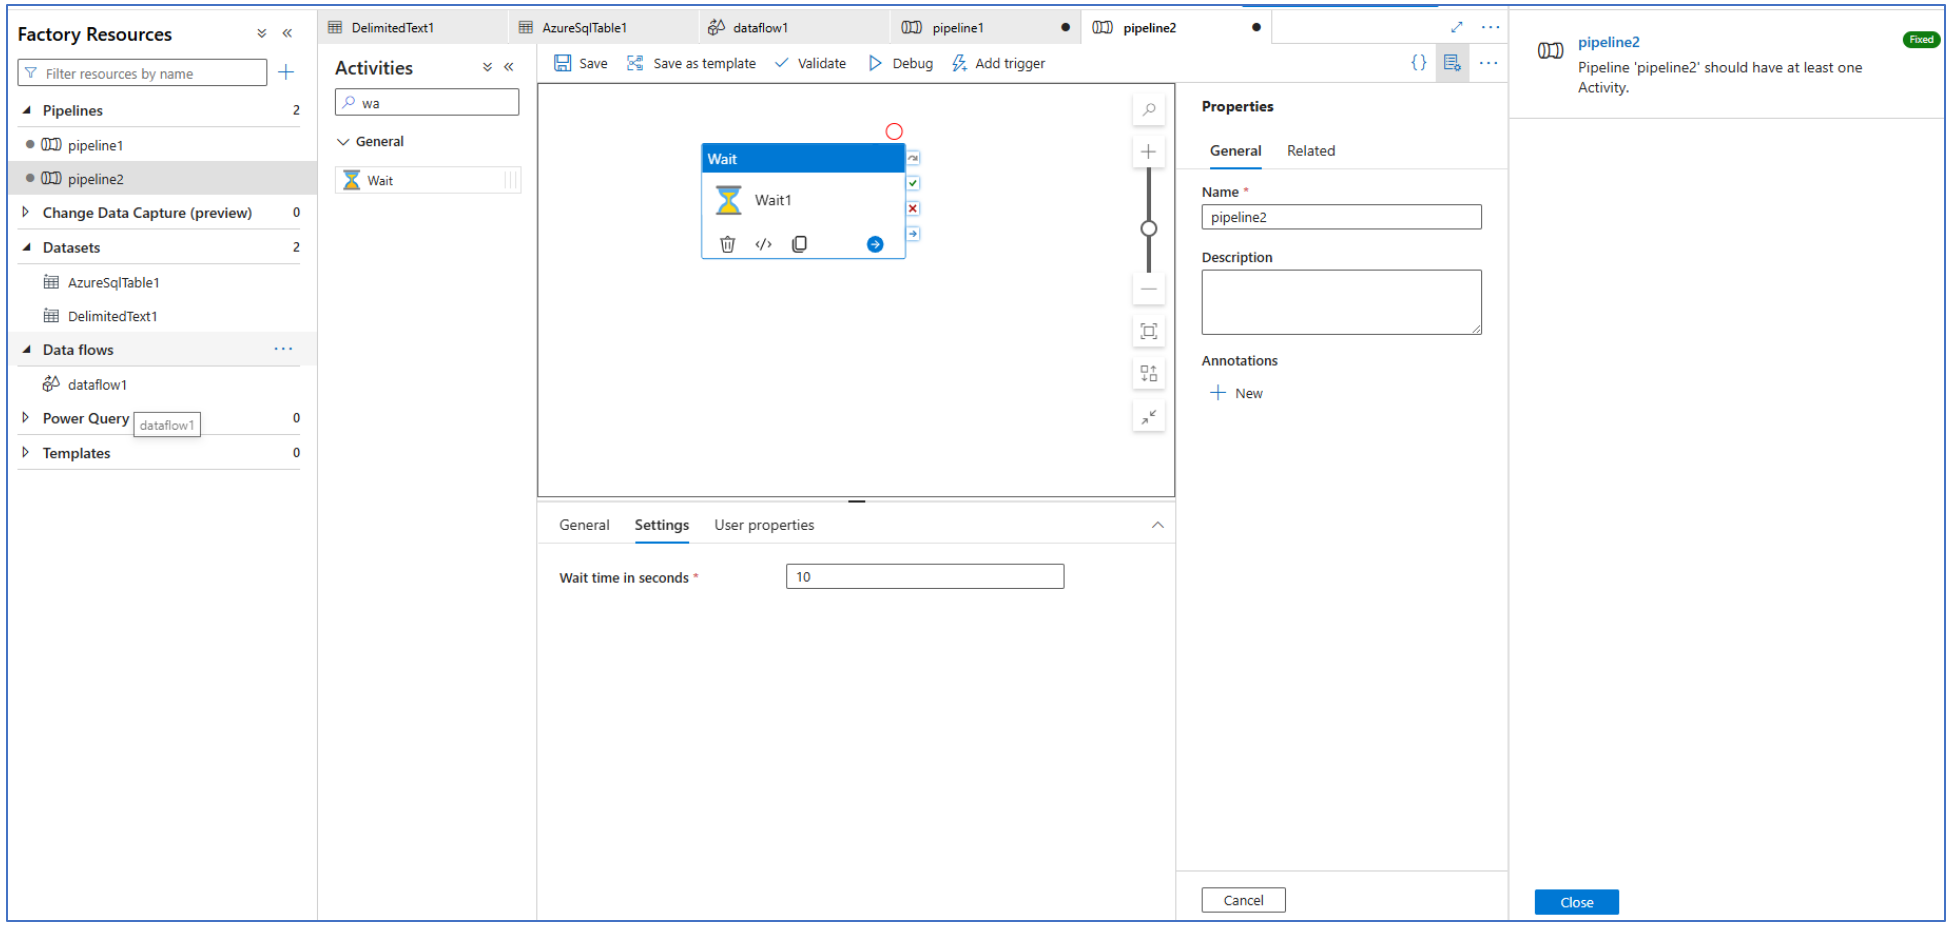
Currently there is only one pipeline

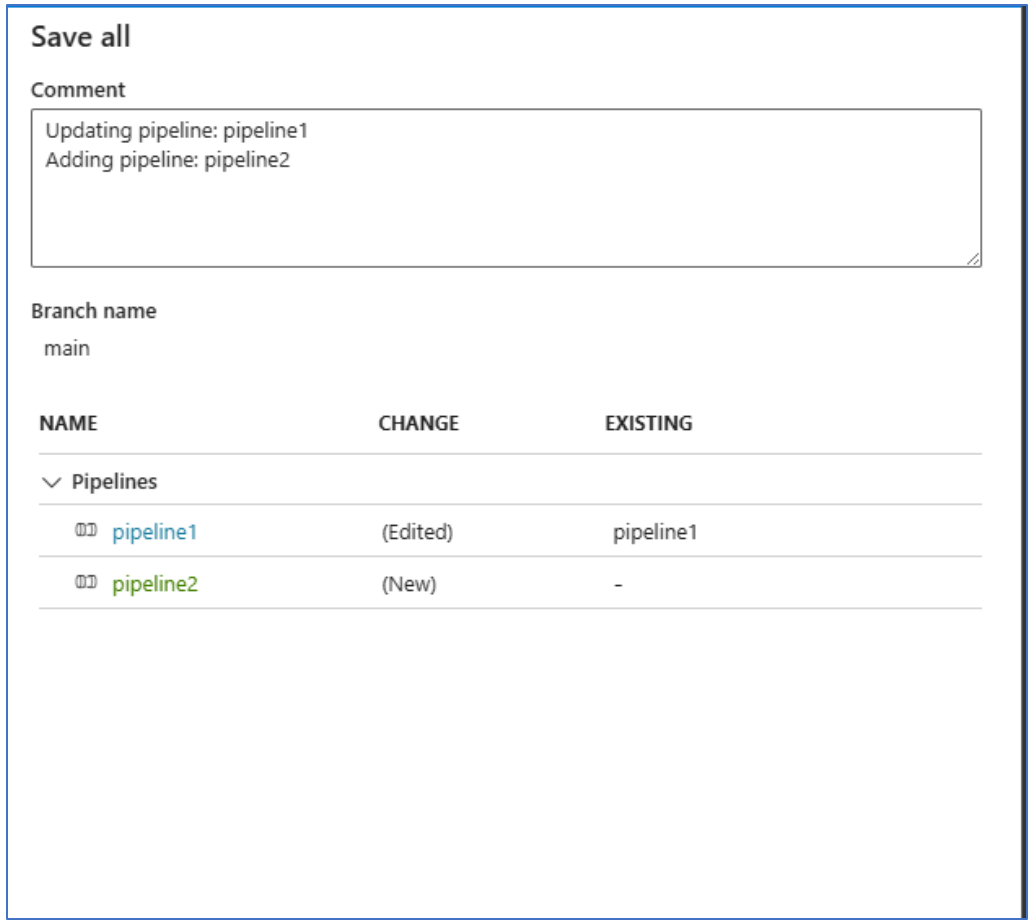


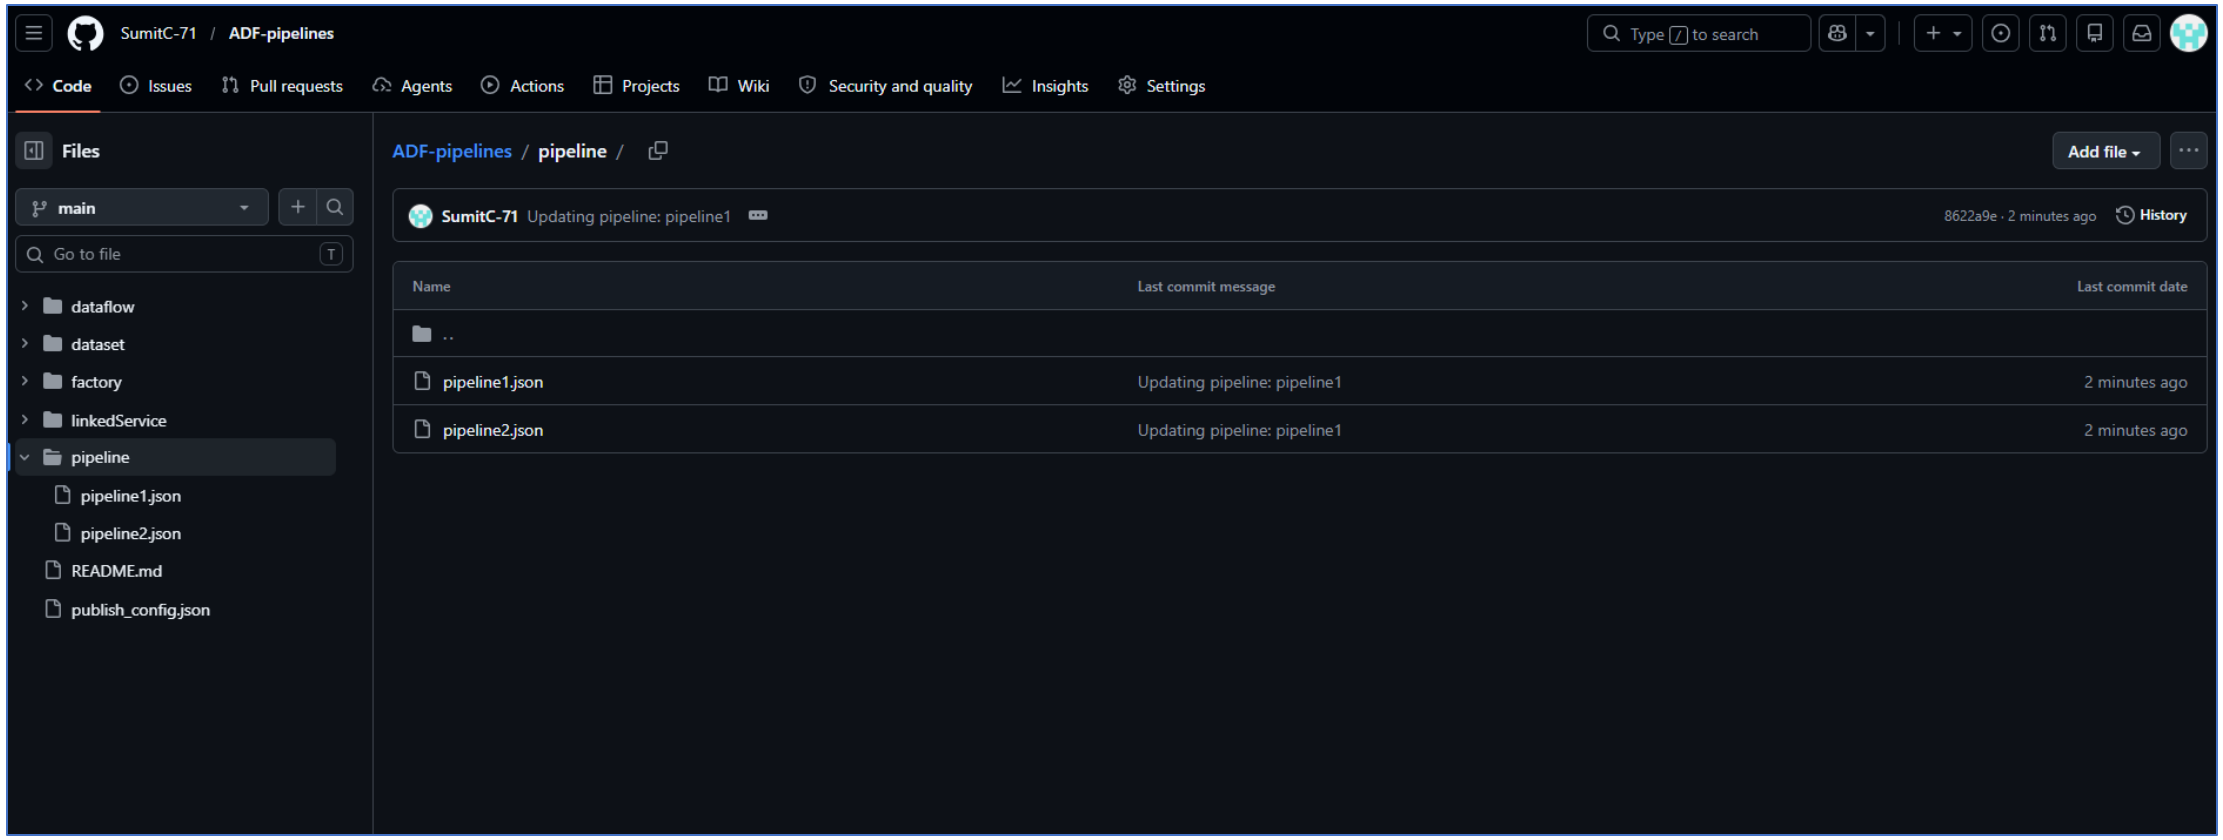
Step 4: Make changes to your pipelines in ADF, commit them to the GitHub repository, and observe the changes reflected in both ADF and GitHub.

here added another pipeline for testing



Saving and publish the changes





Now there are 2 pipelines
