

# Automating a Data Pipeline with **Databricks** Jobs and Workflows

Name: Sumit Chauhan

Dept: Data Engineering

## Objective

The objective of this assignment is to automate a complete data **pipeline** in Databricks. You will use Databricks Jobs and Workflows to orchestrate tasks such as data ingestion, transformation, and saving processed data to Delta Lake.

## Problem Statement

You work for a retail company that tracks sales data across various regions. The raw sales data is stored as CSV files in an Azure Data Lake container. Your task is to:

1. Create a workflow in Databricks to automate the following **pipeline**:
  - **Task 1 (Ingestion)**: Load raw CSV sales data from Azure Data Lake into a Spark DataFrame.
  - **Task 2 (Transformation)**: Perform transformations such as filtering, aggregations, and adding new calculated fields.
  - **Task 3 (Storage)**: Save the processed data in Delta Lake format for analytics and reporting.
2. Schedule the **pipeline** to run daily at midnight.
3. Set up monitoring and alerts to notify you in case of job failures.

## Deliverables

1. **Databricks Notebooks**:
  - Three notebooks for ingestion, transformation, and storage.
2. **Workflow Configuration**:
  - Exported JSON configuration of the multi-task workflow.
3. **Validation**:
  - Provide evidence of the **pipeline** execution (e.g., screenshots of job runs, logs, or Delta Lake table output).
4. **Documentation**:
  - A short report (1–2 pages) summarizing:
    - Data **pipeline** architecture.
    - Challenges faced and how you resolved them.

### About this file

✎ Suggest Edits

This dataset represents synthetic sales data generated for practice purposes only. It is not real-time or based on actual business operations, and should be used solely for educational or testing purposes. The dataset contains information that simulates sales transactions across different products, regions, and customers. Each row represents an individual sale event with various details associated with it.

| Product_ID                                                                         | Sale_Date                                                              | Sales_Rep                                                                                                        | Region                                                                                       | Sales_Amount                                                                                                     | Quantity                                                                  |

# Task1: Ingestion

The screenshot shows a Databricks workspace with two notebooks. The left sidebar shows the workspace tree with the following items:

- Workspace
- Tree view: ON
- .../ LMS-jobs-and-...
- Type to search
- Notebook1-Ingestion (selected)
- Notebook2-Transformation
- Notebook3-Storage
- testing\_catalog\_permissions

The main area displays the code for Notebook1-Ingestion. The code is as follows:

```
storage_account_name = "adls4databricks01"
storage_account_key = "r6pgq0SYxoZEMzsIxVN51MgQXl0dC5K4tqCjzQINHvmKK6dQfVgIvvYZ1DyRaJZUGkosueQY3DDQ+AST2EBpaA=="
container_name = "datasets"

spark.conf.set(
    f"fs.azure.account.key.{storage_account_name}.dfs.core.windows.net",
    storage_account_key
)
```

The code is executed, and the output shows the file path being read from:

```
file_path = (
    f"abfss://{container_name}"
    f"@{storage_account_name}.dfs.core.windows.net"
    f"/sales_data.csv"
)

print("Reading from:", file_path)
```

Reading from: abfss://datasets@adls4databricks01.dfs.core.windows.net/sales\_data.csv

# Add Schedule

The screenshot displays the Databricks Jobs & Pipelines interface. At the top, the breadcrumb 'Jobs & Pipelines >' is followed by the job name 'LMS-job-sales-data-processing' and a 'Send feedback' link. Below this, the 'Runs' and 'Tasks' tabs are visible, with 'Tasks' being the active tab. The main workspace area shows a task graph with a single task 'Task1-ingestion' and a message 'No task selected'.

The 'Schedules & Triggers' modal is open, showing the following configuration:

- Trigger Status:** Active (selected), Paused
- Trigger type:** Scheduled
- Schedule type:** Interval, Schedule (selected)
- Schedule:** Every Day at 18 : 13 (UTC+05:30) Asia/Calcutta
- ☐ Show cron syntax

At the bottom of the modal are 'Cancel' and 'Save' buttons. To the right of the modal, the job's configuration panel is visible, showing 'Run as' (Sumit Chauhan), 'Description' (Add description), 'Lineage' (3 upstream tables, 3 downstream tables), 'Performance' (Off), and a 'Schedules & Triggers' section with a trigger at 'At 06:13 PM (UTC+05:30 — Asia/Calcutta)' and buttons for 'Edit trigger', 'Pause', and 'Delete'.

# Edit notification

The screenshot displays the Databricks Jobs & Pipelines interface. At the top, the breadcrumb 'Jobs & Pipelines >' is visible. The main header shows the job name 'LMS-job-sales-data-processing' with a star icon and a 'Send feedback' link. Below the header, there are tabs for 'Runs' and 'Tasks'. The 'Tasks' tab is active, showing a task named 'Task1-ingestion' with a folder icon and the text 'My-Compute'. A message below the task states 'No task selected. Choose a task from the graph to edit its properties.' A modal window titled 'Job notifications' is open in the center. It lists supported destinations: Email, Microsoft Teams, PagerDuty, Slack, and Webhook. Below this is a table with columns: Destination, Start, Success, Failure, Duration warning, and Streaming backlog. The table contains one row for the email destination 'sumit.chauhan@simformsolutions.com', with checkboxes for Start, Success, Failure (checked), Duration warning, and Streaming backlog. At the bottom of the modal, there are checkboxes for 'Mute notifications for skipped runs' and 'Mute notifications for canceled runs', an 'Add notification' button, and 'Cancel' and 'Save' buttons. On the right side of the interface, there are sections for 'Compute' (Cluster terminated, My-Compute, Single node: Standard\_D4ds\_v4 · Release: 17.3.11), 'Tags' (Add tag), 'Job notifications' (sumit.chauhan... On failure, Edit notifications), 'Duration and streaming backlog thresholds' (No thresholds defined, Add metric thresholds), and 'Git' (Not configured, Add Git settings).
