

DAX functions

Name: Chauhan Sumit

Dept: Data Engineering

- Create a measure named Total Customers, to calculate the number of distinct AdventureWorks customers who made a transaction.

- Create a measure named Return Rate, defined as quantity returned divided by quantity sold.

a) Logical Function

Create a calculated column in the Customer Lookup table named Customer Priority:

- > If the customer is a parent and has an annual income > \$100,000, Custom Priority = Priority
- > Otherwise, Customer Priority = Standard

✕ ✓ 1 Customer Priority = 2 IF(AND(Customers[AnnualIncome]>10000,Customers[TotalChildren]>0), "Priority", "Standard")													
CustomerKey	Prefix	FirstName	LastName	BirthDate	MaritalStatus	Gender	EmailAddress	AnnualIncome	TotalChildren	EducationLevel	Occupation	HomeOwner	Customer Priority

Returns

Create a calculated column in the Customer Lookup table named Customer income:

- > If annual income is $\geq$ \$150,000, Very High
- > If annual income is $\geq$ \$100,000, High
- > If annual income is $\geq$ \$50,000, Average
- > Otherwise, Income Level = Low

Use a SWITCH function* to create another column named Education Category:

- If EducationLevel is High School or Partial High School, Education Category = High School
- If EducationLevel is Bachelors or Partial College, Education Category = Undergrad
- If EducationLevel is Graduate Degree, Education Category = Graduate

<pre>1 Education Category = 2 SWITCH(3 Customers[EducationLevel], 4 "High School", "High School", 5 "Partial High School", "High School", 6 "Bachelors", "Undergrad", 7 "Partial College", "Undergrad", 8 "Graduate Degree", "Graduate", 9 BLANK() 10)</pre>

d) Calculate Function

Create a new measure named Bike Returns to calculate the total quantity of bikes returned

✖

✓

```
1 Bike Returns =  
2 CALCULATE(  
3     [Total Returns]  
4     , Categories[CategoryName] = "Bikes"  
5 )
```

2K
Total Returns

429
Bike Returns

Create a matrix to show Bike Returns (values) by Start of Month (rows). What do you notice about the volume of bike returns over time?

This is an interactive matrix table showing Bike Returns. The table has two main sections: one for the current year (2021) and one for the previous year (2020). Each section is divided into four quarters (Qtr 1, Qtr 2, Qtr 3, Qtr 4) and then lists the months. The values for each month are displayed in the right column. The table is currently filtered to show data for the year 2021.

Year	Bike Returns
Qtr 1	17
January	4
February	4
March	9
Qtr 2	29
April	14
May	11
June	4
Qtr 3	11
July	3
August	6
September	2
Qtr 4	29
October	11
November	5
December	13
2021	172
Qtr 1	24
January	8
February	8
March	8
Qtr 2	23
April	5
May	10
June	8
Qtr 3	48
July	12
August	14
September	22
Qtr 4	77
October	26
November	25
Total	429

Create a new measure named Bike Sales to calculate the total quantity of bikes sold, and add it to the matrix. What do you notice?

Create a new measure named Bike Return Rate using either CALCULATE or DIVIDE, and add it to the matrix

The screenshot shows a Power BI interface. At the top, a formula bar contains the following DAX code:

```
1 Bike Return Rate =  
2 DIVIDE([Bike Returns], [Bike Sales]) * 100
```

Below the formula bar, a matrix visualization is displayed. The matrix has four columns: Quarter, Bike Sales, Bike Returns, and Bike Return Rate. The data is as follows:

Quarter	Bike Sales	Bike Returns	Bike Return Rate
Qtr 3	2287	59	2.58
Qtr 4	3078	106	3.44
Qtr 1	3782	104	2.75
Qtr 2	4782	160	3.35
Total	13929	429	3.08

On the left side of the matrix, a card visualization displays the value 3.08, labeled "Bike Return Rate".

e) Calculate & all function

Create a new measure named All Returns to calculate the total number of returns, regardless of filter context

```
1 ALL Returns =  
2 CALCULATE(  
3     SUM(Returns[ReturnQuantity])  
4     , ALL()  
5 )
```

2K

ALL Returns

2K

1	1192	26	2.18							
Total	1192	26	2.18							

Create a new measure named % of All Returns that divides Total Returns by All Returns

1 % of ALL Returns =

2 DIVIDE([Total Returns],[ALL Returns])

2K

ALL Returns

124

Total Returns

0.07

% of ALL Returns

Day	Bike Sales	Bike Returns	Bike Return Rate
1	771	24	3.11
Total	771	24	3.11

Create a matrix to show % of All Returns (values) by product Category Name (rows).

CategoryName	% of ALL Returns
Clothing	0.15
Bikes	0.23
Accessories	0.62
Total	1.00

Which category accounts for the largest percentage of returns? The smallest?"

- > category with largest percentage of returns: Accessories with 0.62(62%)
- > category with minimum percentage of returns: Components with 0% returns

f) Iterator Function

Create a new measure named Total Cost that multiplies the order quantities in the Sales Data table by the product cost in the Product Lookup table, then calculates the sum

Create a new measure named Total Profit (revenue minus cost)

Create a matrix to show Total Profit (values) by Year (rows).

Year	Total Profit
2020	2601602
2021	3967084
2022	3889029
Total	10457715

How much profit has AdventureWorks earned so far in 2022

g) Time Intelligence Function

Previous Month Returns

1 Previous Month Returns =

2 CALCULATE(

3 [Total Returns]
