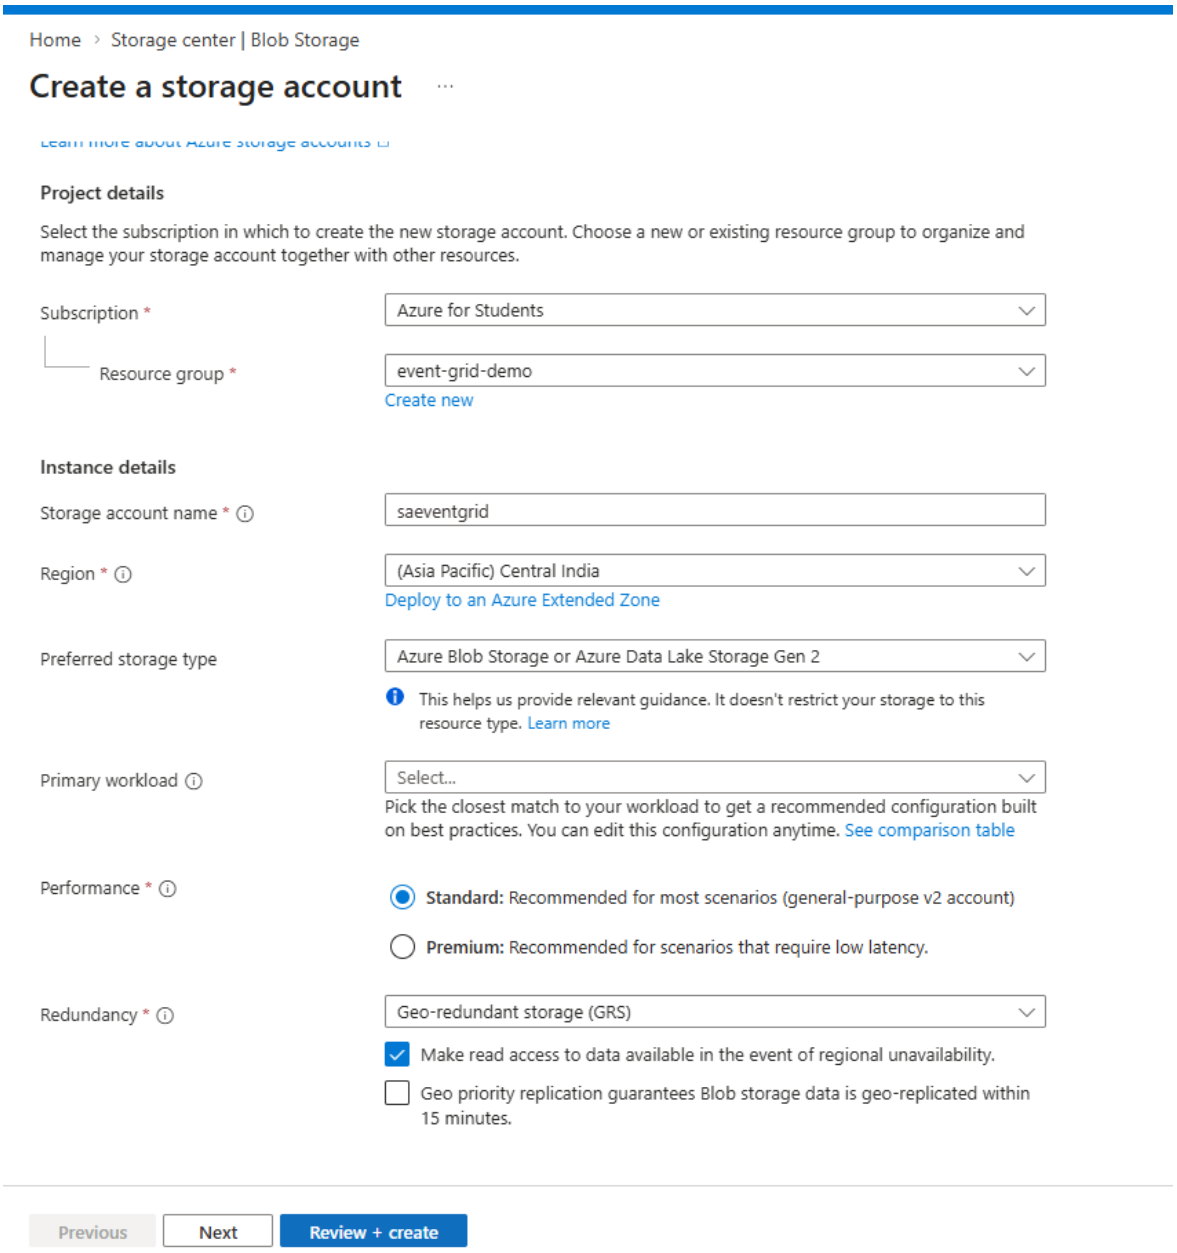
Name: Chauhan Sumit K.

Dept: Data Engineering

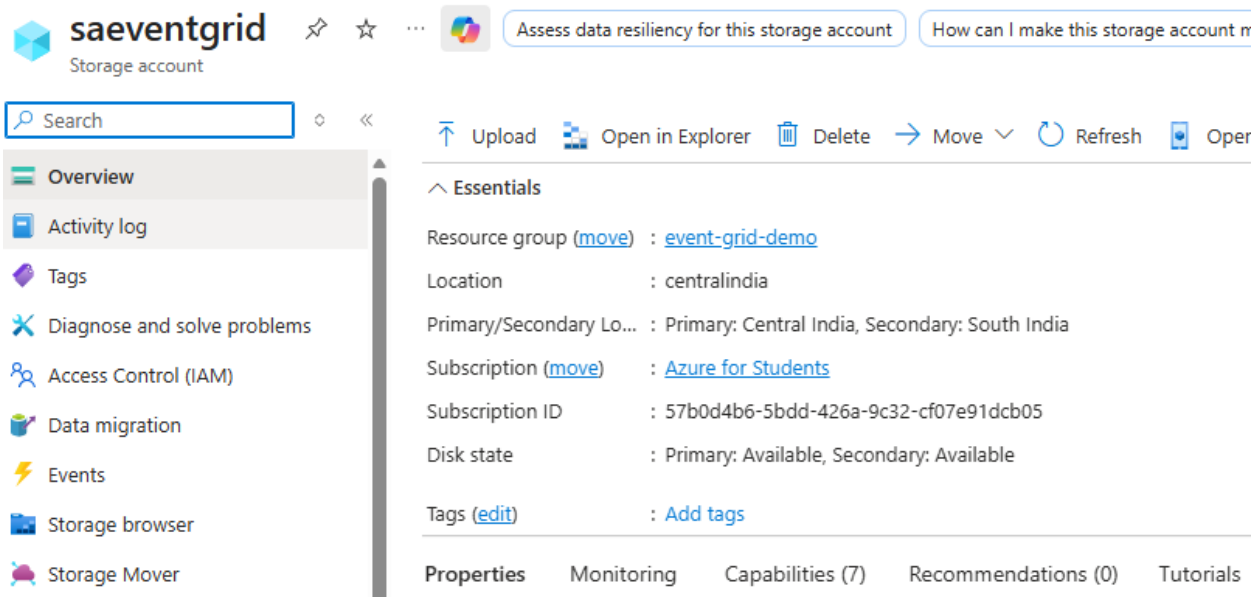
Task:

Demo for event grid

Create a new storage account



Review and submit



Event grid is essential service in azure

Main two things you need to create are topics and subscriptions

Next step is to create a logic app

Fill the details:

Create Logic App (Multi-tenant) ...

Basics Tags Review + create

Create a logic app, which lets you group workflows as a logical unit for easier management, deployment and sharing of resources. Workflows let you connect your business-critical apps and services with Azure Logic Apps, automating your workflows without writing a single line of code.

Project Details

Select a subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Subscription * Azure for Students

Resource Group * event-grid-demo

Create new

Instance Details

Logic App name * new-blob-event

Region * Central India

Enable log analytics * Yes No

There are no log analytics workspace resources in the selected subscription. In order to enable log analytics, either create a new log analytics workspace resource or switch to a subscription which already has one.

Workflow Type

- **Stateful**
- **Conversational Agents (Preview):** Stateful workflows that use AI agents to complete tasks through chat interactions or other agents. Not supported in the selected region.
- **Autonomous Agents (Preview):** Stateful workflows that use AI agents to complete tasks and can start from any trigger, such as an event, schedule, or API call. Not supported in the selected region.

Review + create < Previous Next : Tags >

Review and create:

Create Logic App (Multi-tenant) ...

Basics Tags **Review + create**

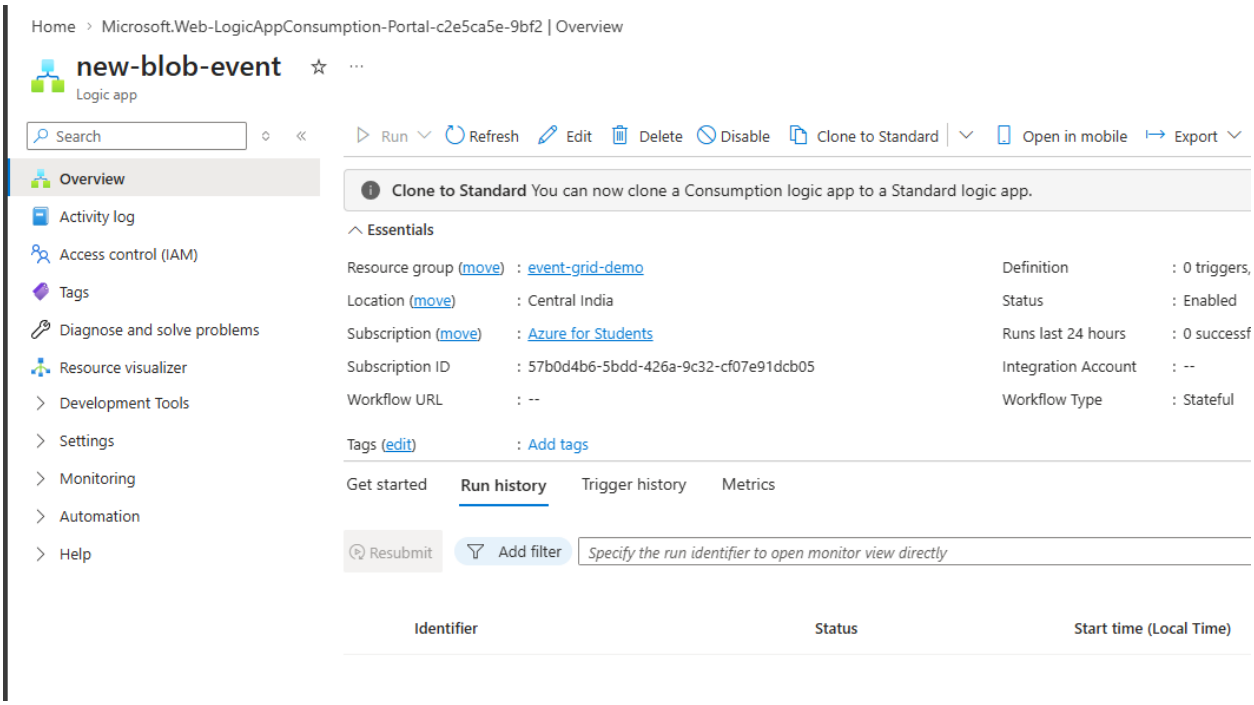
Summary

Logic App
by Microsoft

Details

Subscription	57b0d4b6-5bdd-426a-9c32-cf07e91dcb05
Resource Group	event-grid-demo
Name	new-blob-event
Region	centralindia
Log analytics	Disabled
Workflow Type	Stateful

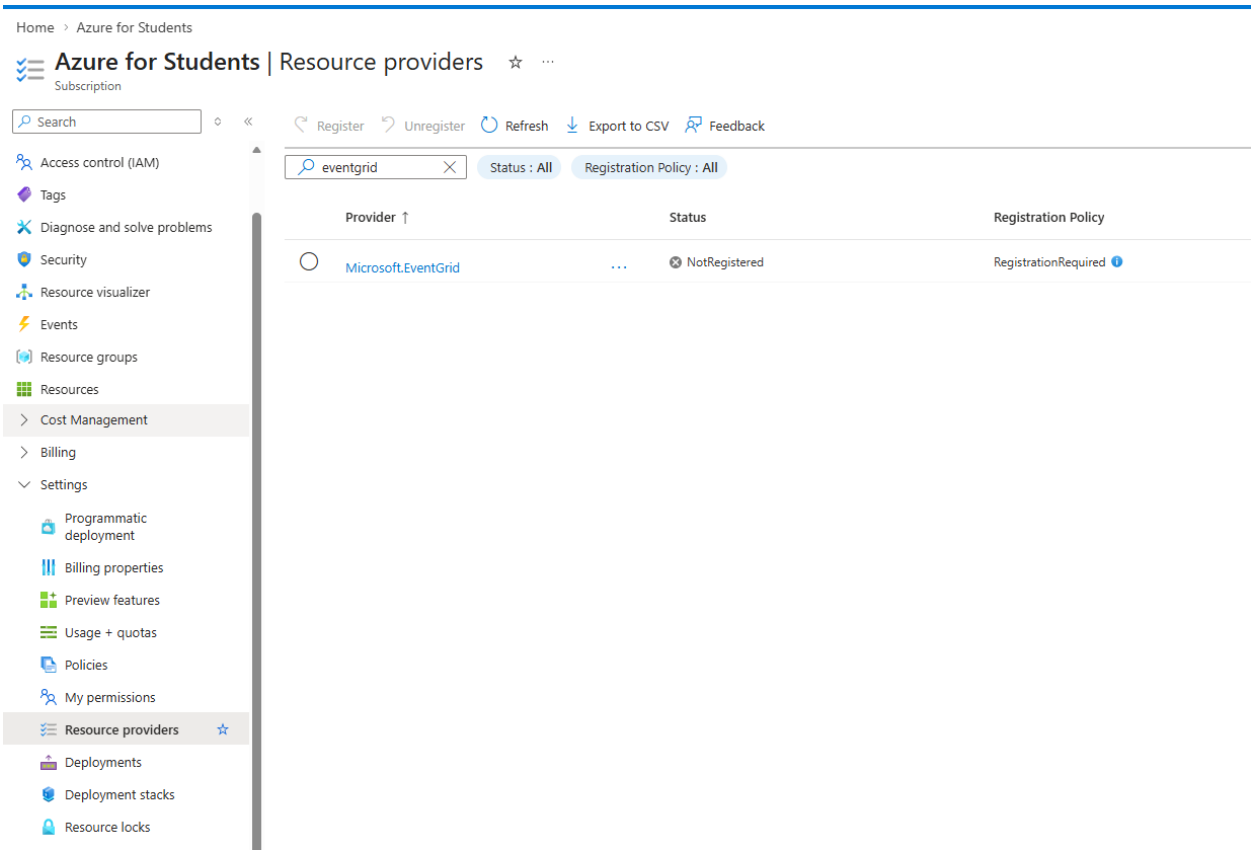
Once the deployment is successful, go to resources



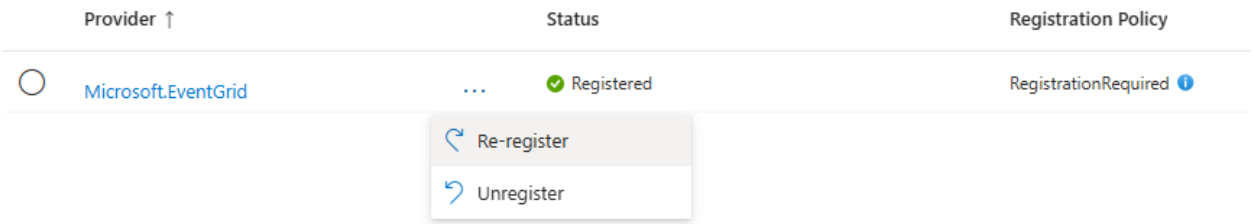
Firstly verify if eventgrid is registered on your subscription or not

To to your subscription window (azure for students) > left side bar > settings > resource providers

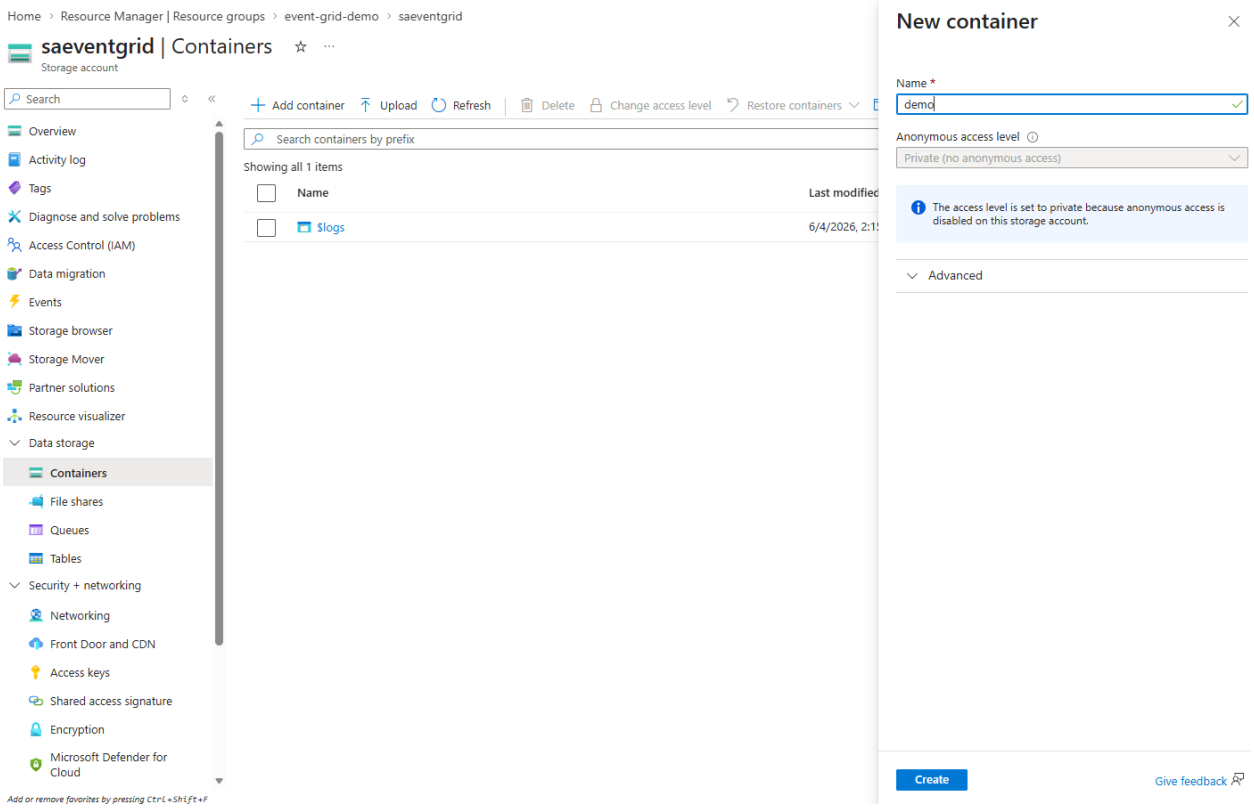
Then search for eventgrid to check if its registered or not



If not registered, click on three dots and register it

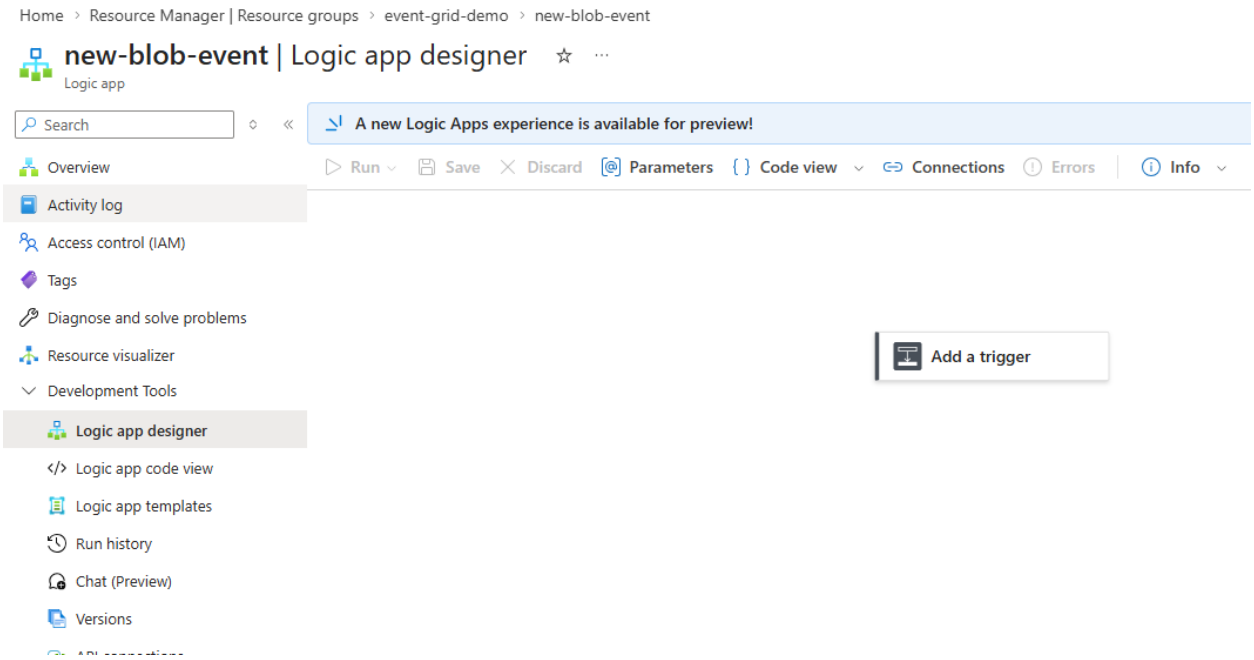


Now create a blob container to your storage account



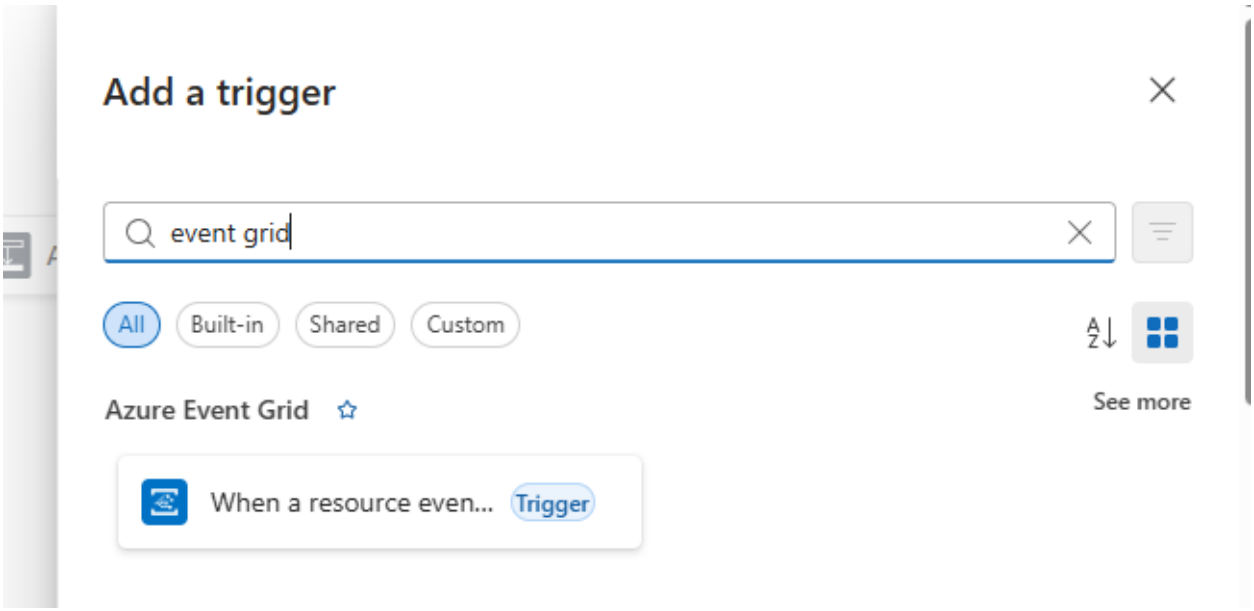
Now go to the logic app that you have created

In that left side bar > development tools > logic app designer

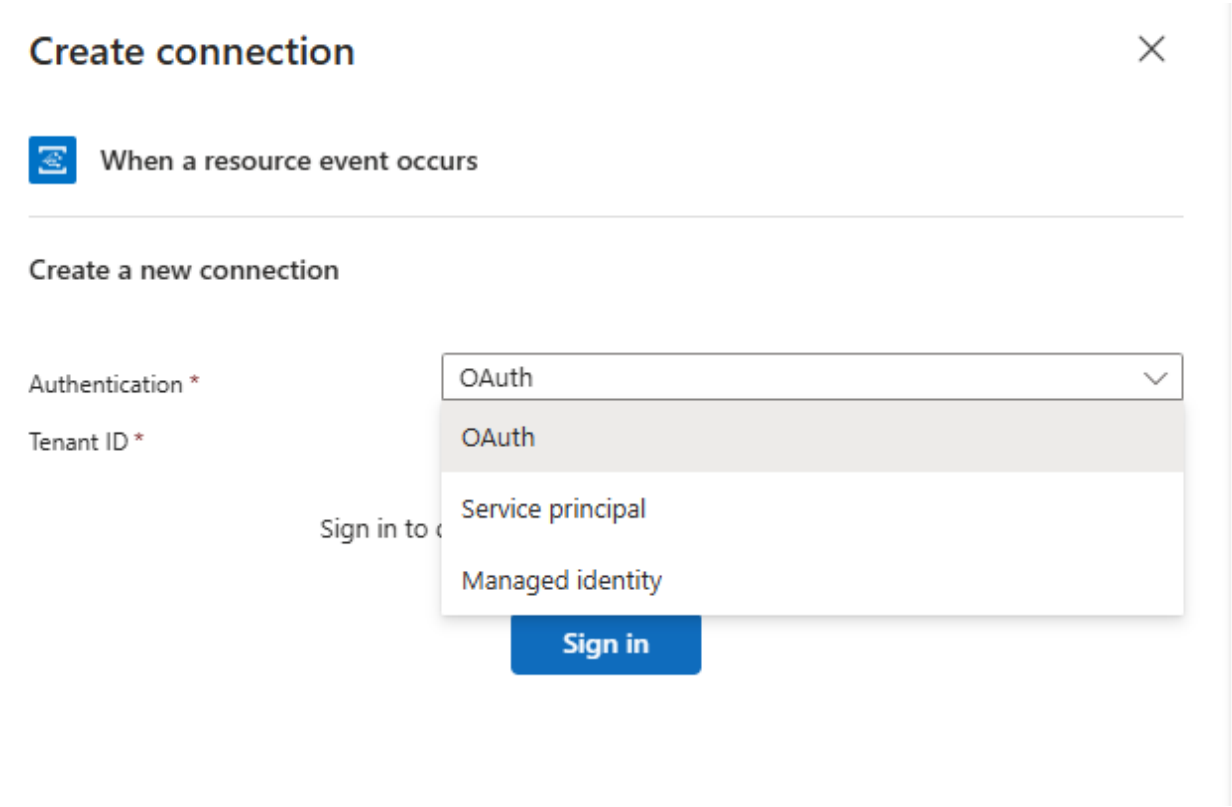


Click on add a trigger

Search for event grid and use the Azure event grid option



Click on the trigger which says “when a resource event...”

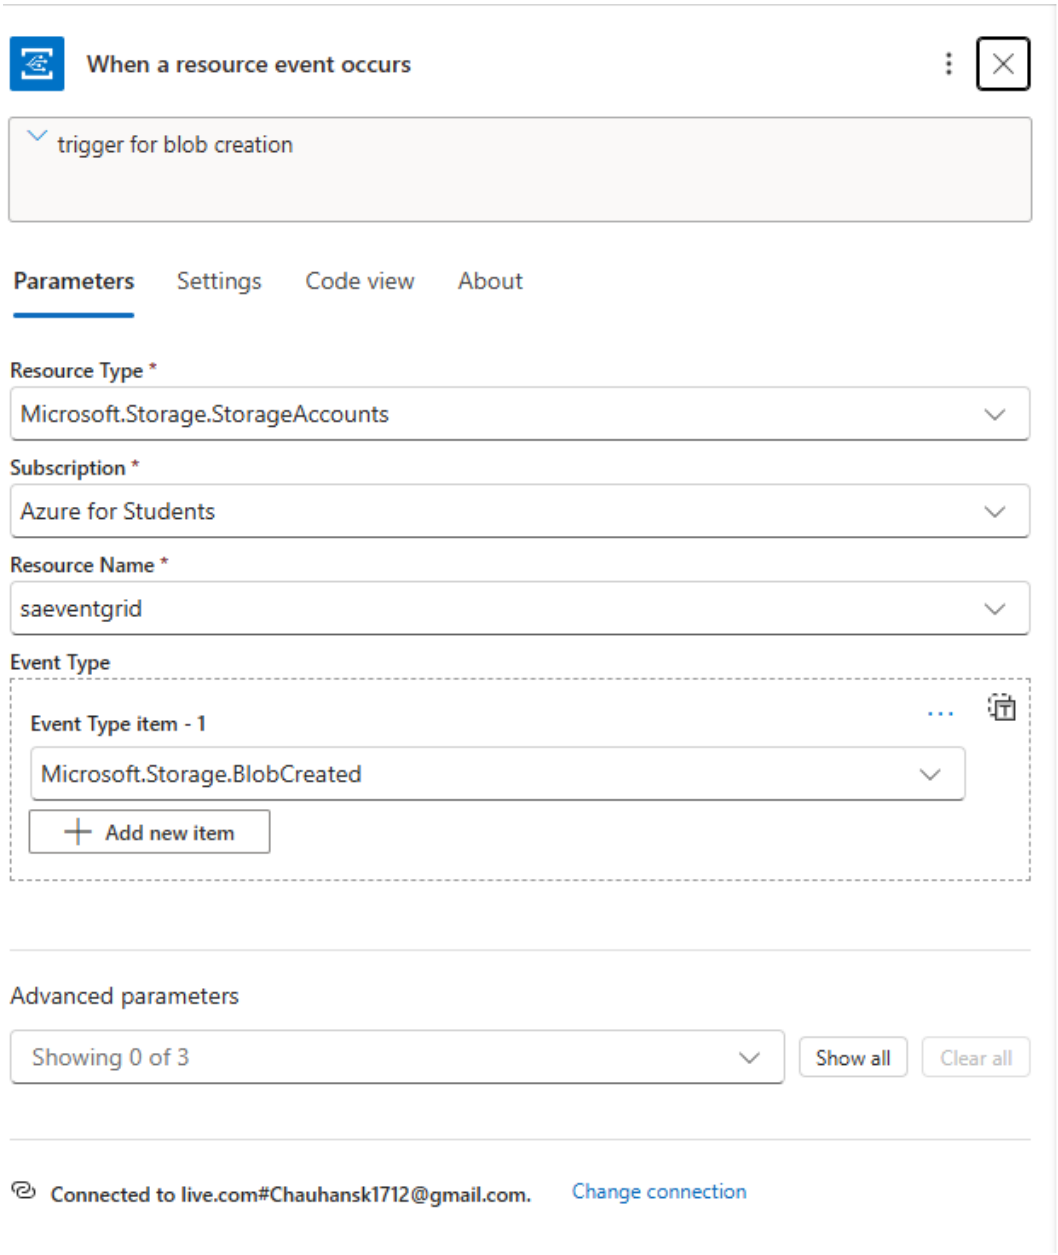


Keep authentication OAuth
it is best as it only requires to login with your current account

Add details

Like what kind of event you want to apply trigger on

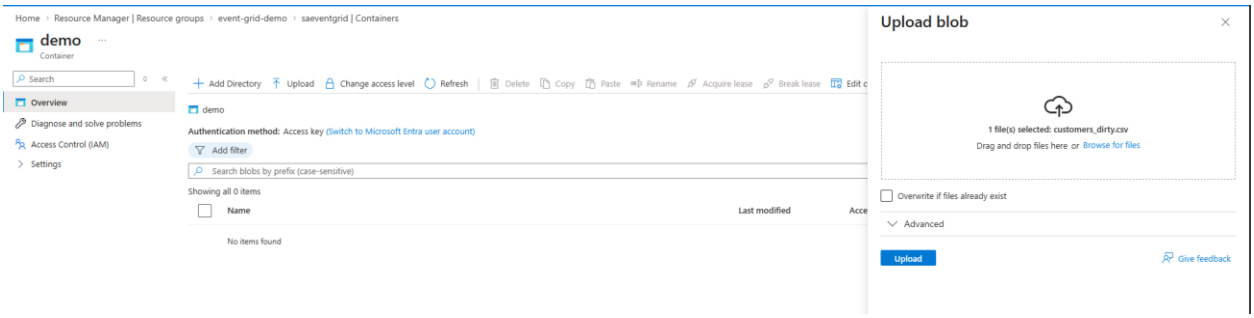
BlobCreation in our case



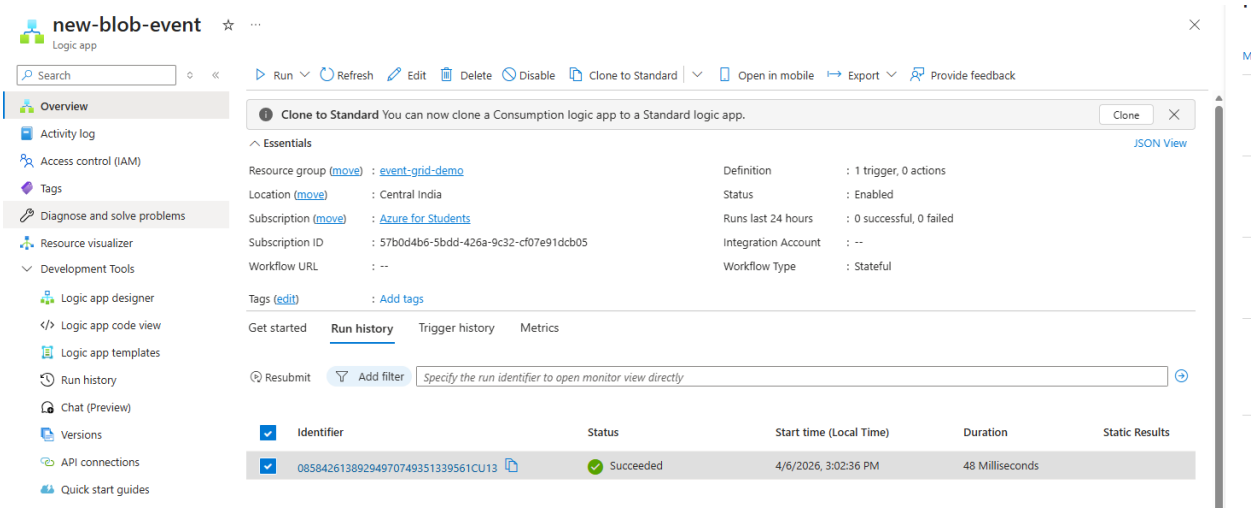
Open your resource group and see the resource created

Name ↑	Type	Location
azureeventgrid	API Connection	Central India
new-blob-event	Logic app	Central India
saeventgrid	Storage account	Central India
saeventgrid-23f4abfb-8e8e-41d1-abd2-86fc7350bf11	Event Grid System Topic	Central India

Now add any file to container you have created on your storage account



You will notice that it will be reflected in your logic app (overview)



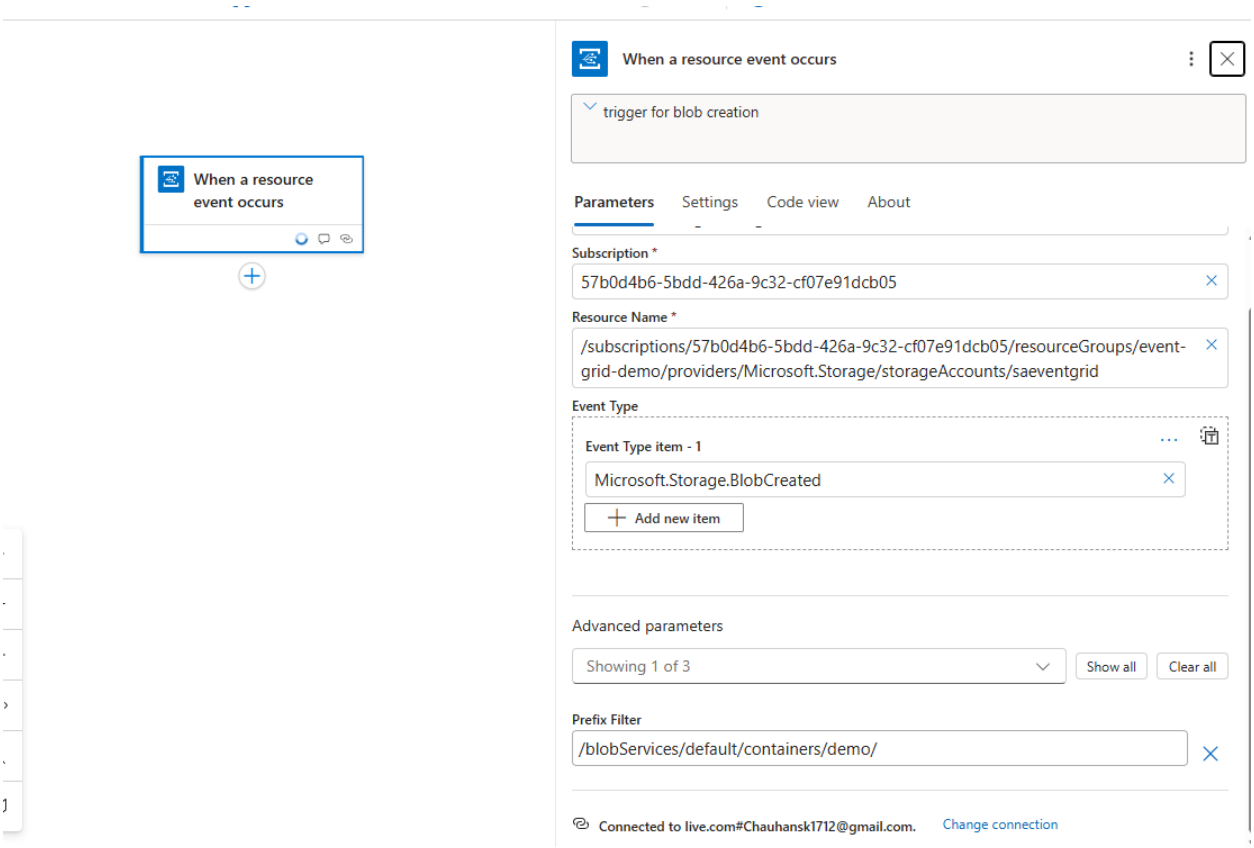
Now create demo2 container on same storage account and upload a file in it

It will be reflected in the logic app

Identifier	Status	Start time (Local Time)	Duration	Static Results
08584261387988916617263196395CU02	Succeeded	4/6/2026, 3:04:46 PM	161 Milliseconds	
08584261389294970749351339561CU13	Succeeded	4/6/2026, 3:02:36 PM	48 Milliseconds	

To prevent uploads from demo2 container we can use

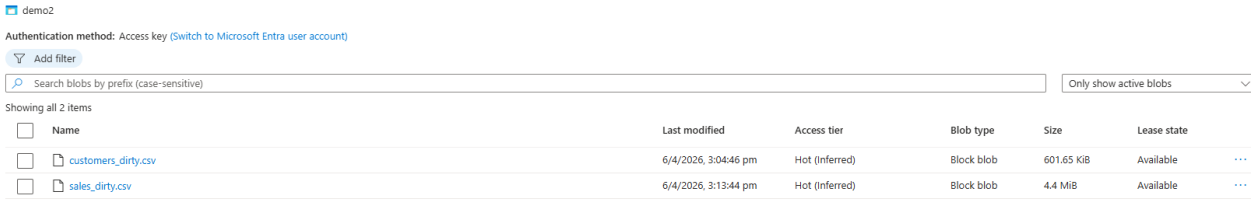
Prefix filter and add appropriate path to that prefix filter



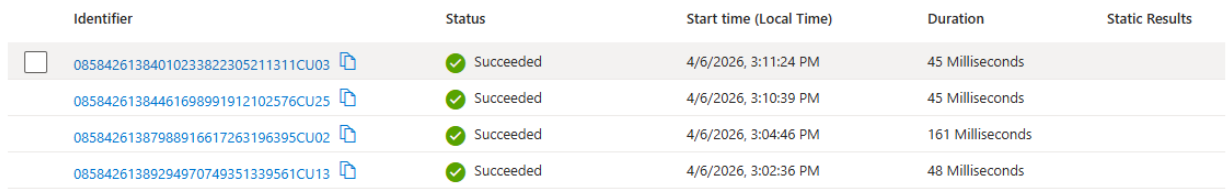
We already had four events

Identifier	Status	Start time (Local Time)	Duration	Static Results
08584261384010233822305211311CU03	Succeeded	4/6/2026, 3:11:24 PM	45 Milliseconds	
08584261384461698991912102576CU25	Succeeded	4/6/2026, 3:10:39 PM	45 Milliseconds	
08584261387988916617263196395CU02	Succeeded	4/6/2026, 3:04:46 PM	161 Milliseconds	
08584261389294970749351339561CU13	Succeeded	4/6/2026, 3:02:36 PM	48 Milliseconds	

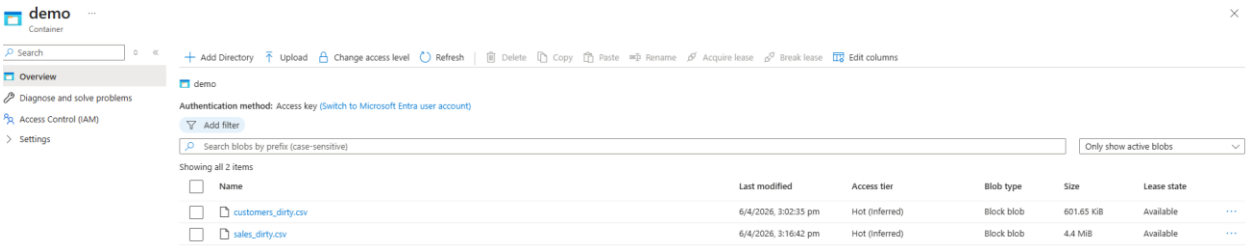
Now if we upload from demo2 it will not allow it



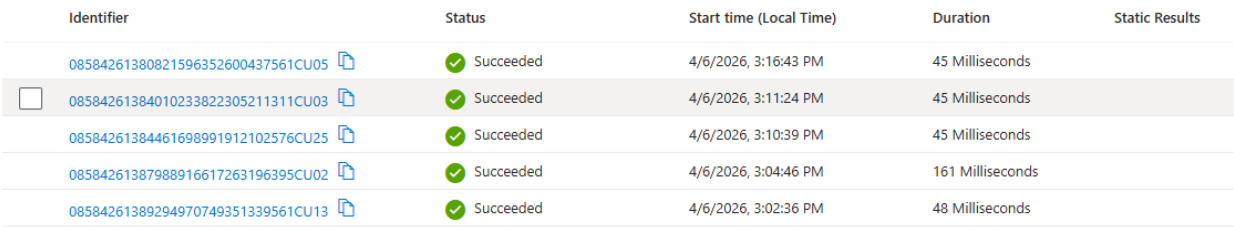
After Adding sales_dirty.csv



Addign sales_dirty.csv into demo container



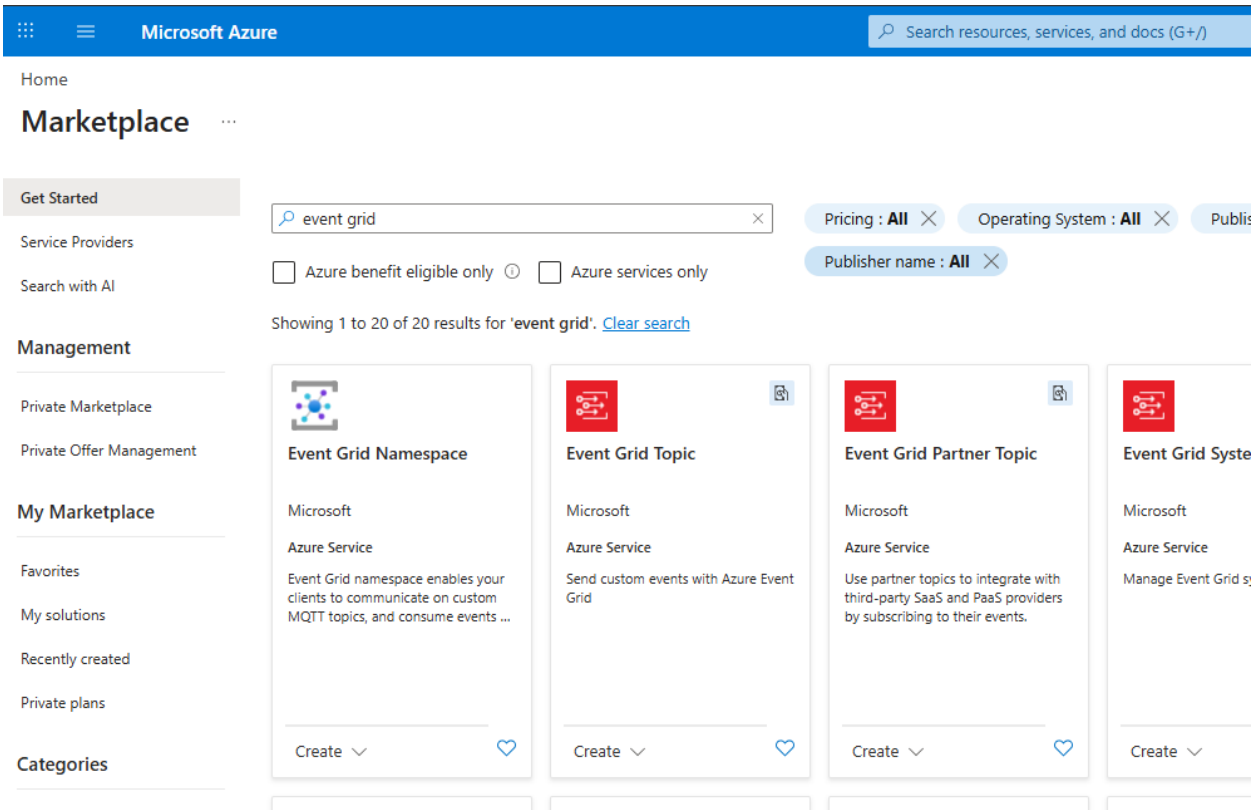
After adding we can see that there are 5 records instead of 4



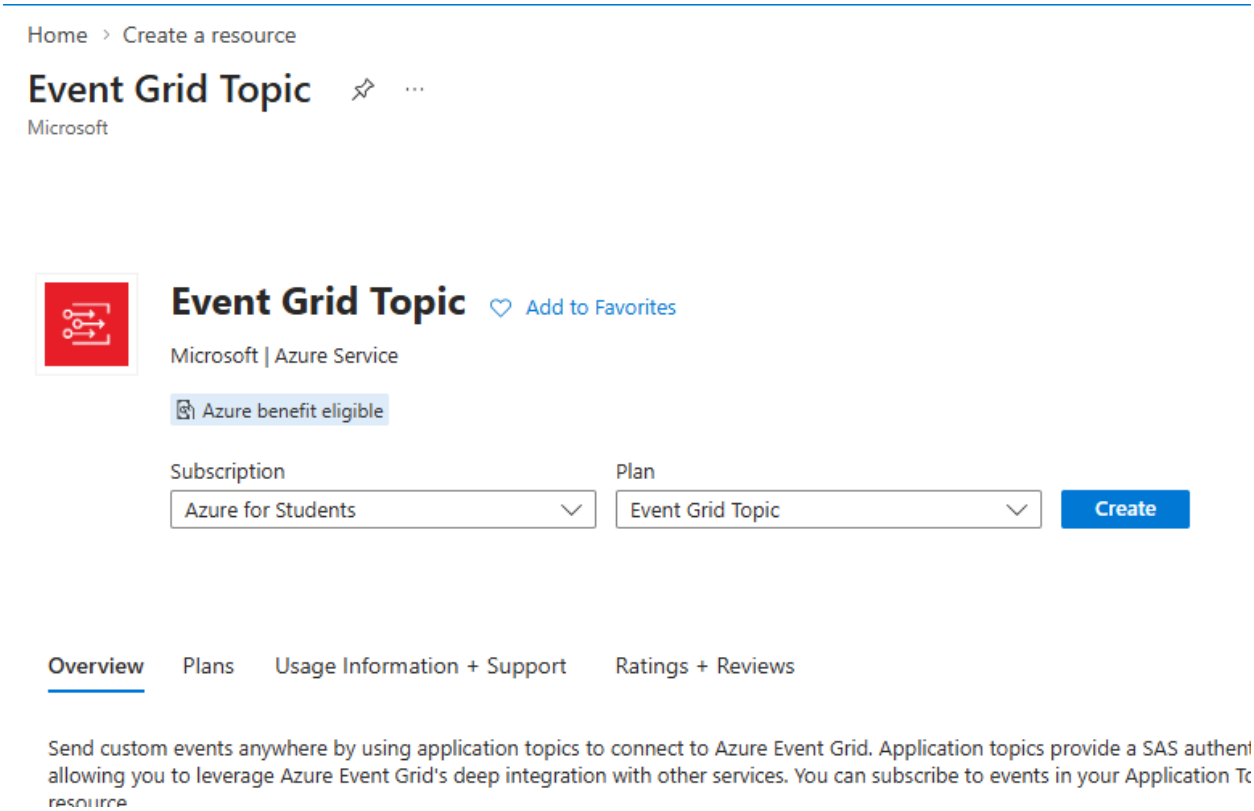
Creation of event grid topics:

Click on add new resources on azure portal (for that click on top left corner button)

Then search for event grid



Click on event grid topics



Create Topic

Event Grid

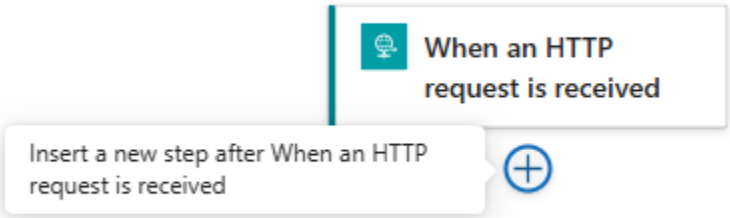
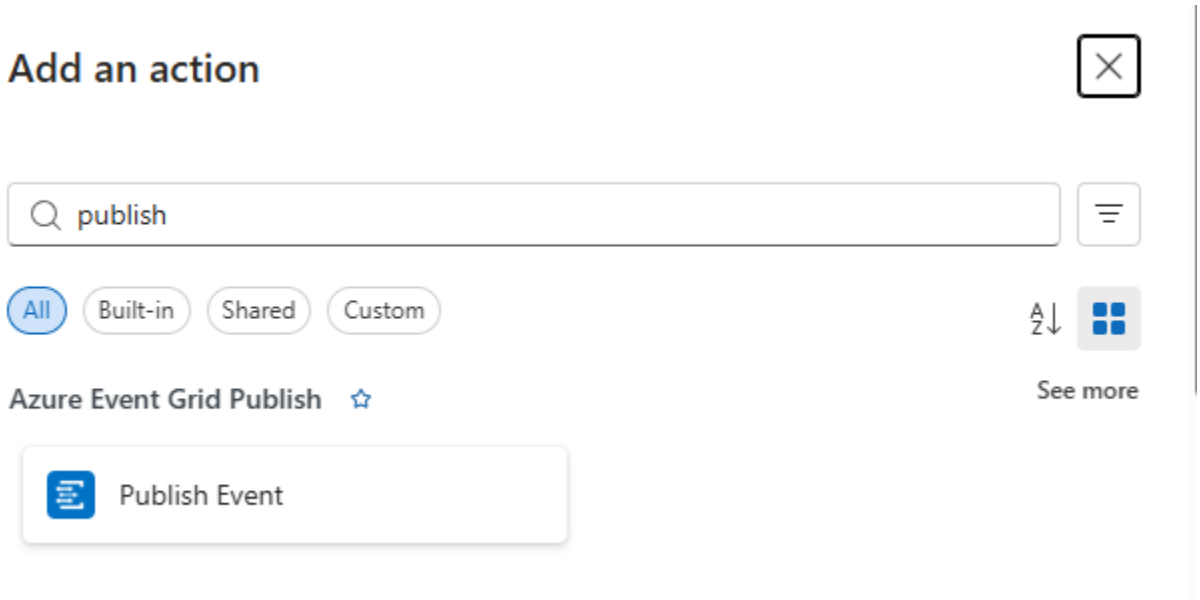
When an HTTP request i...
Trigger

Once this is added



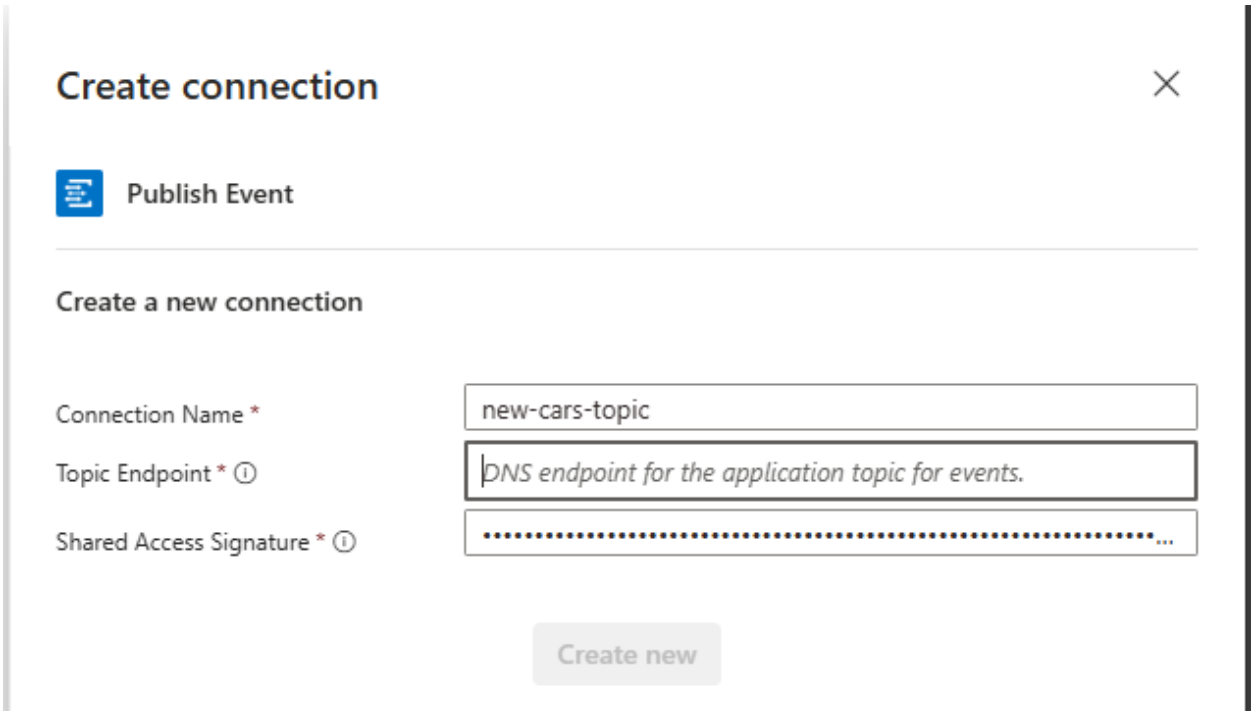
Add another action

Search for publish and add Azure event grid Publish



For publishing an event

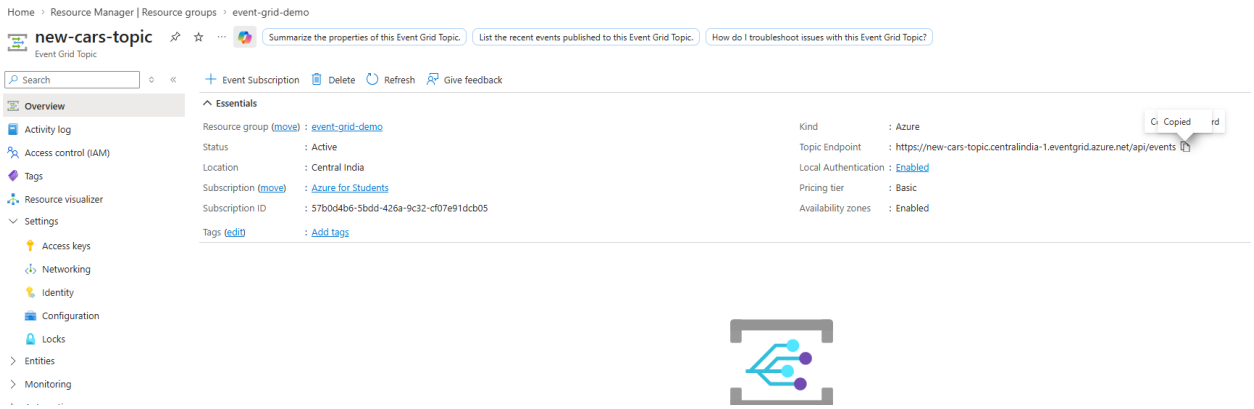
We need to create a connection



Enter connection name same as your topic

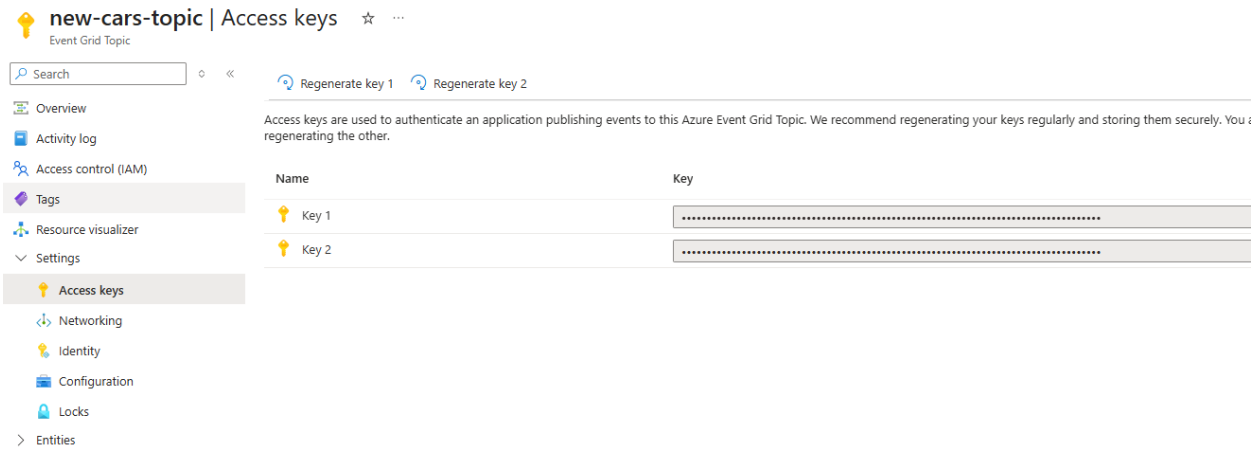
For topic endpoint go your event grid topic view
in that Overview

You will find the topic endpoint



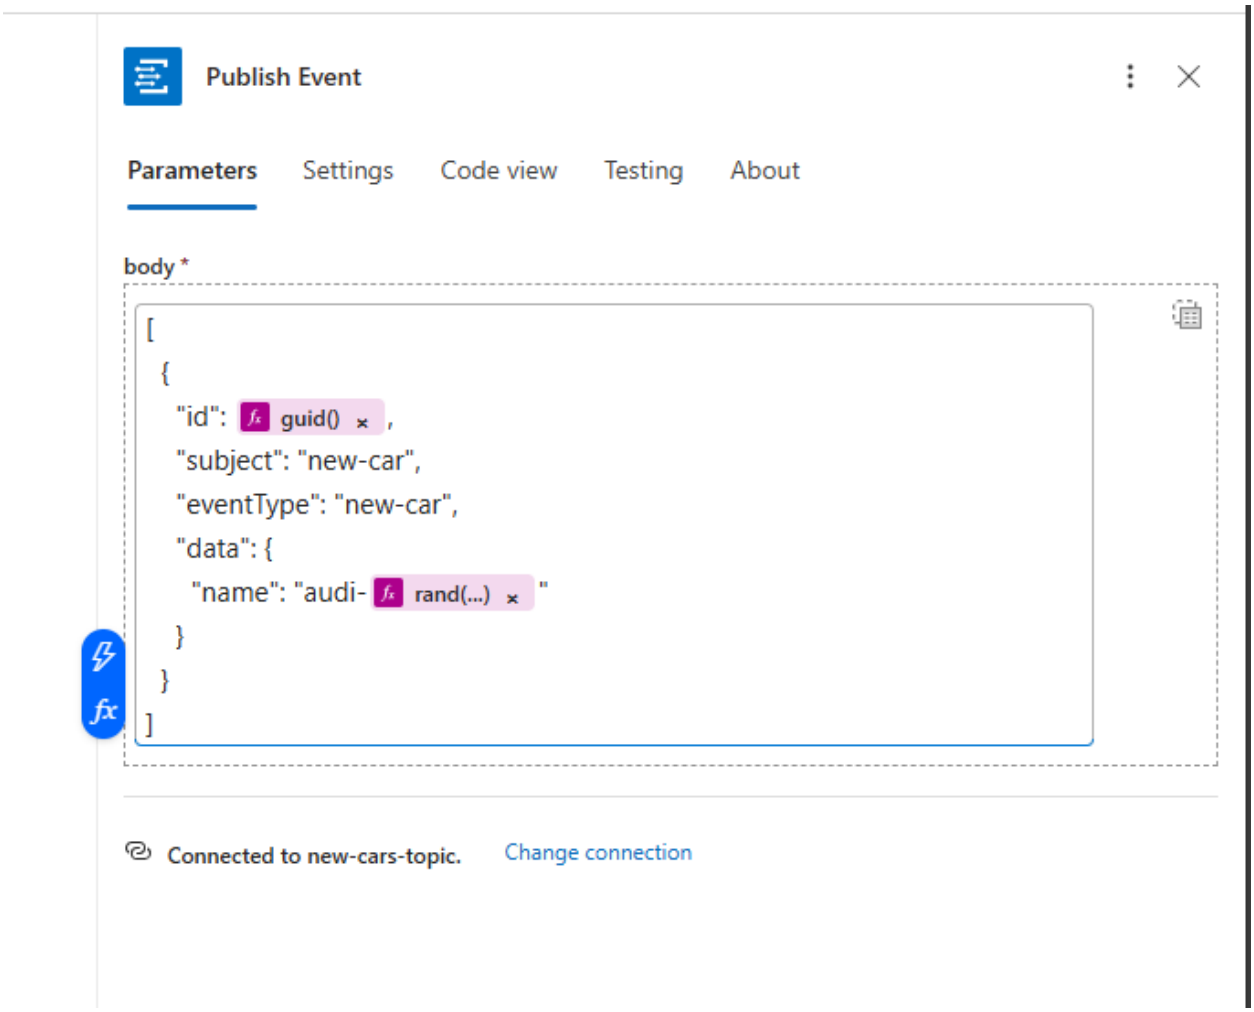
For shared access signature

Settings > access keys and copy any one of them



Then you need to setup a workflow

For that you need to add an item into your publisher



You may find a form instead of JSON

And In that form you may find that there is no data field provided

Once save and run the application, then you will be able to see JSON like format and

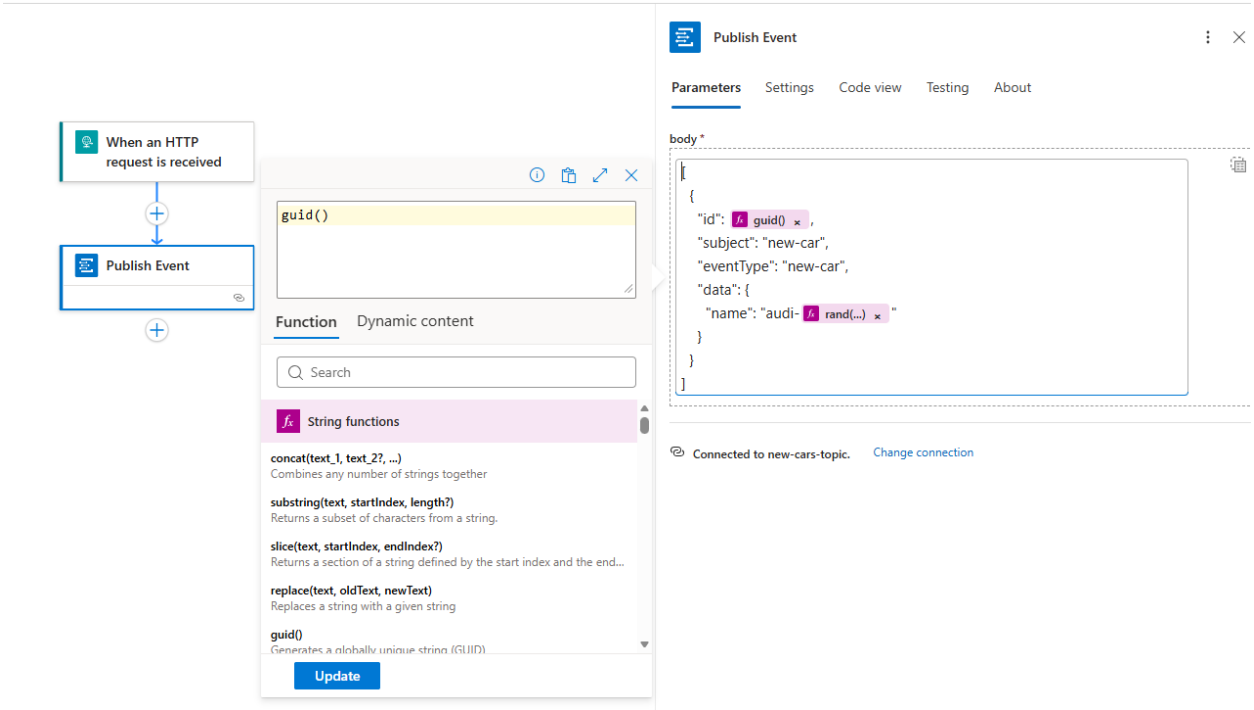
“data”: null

You set it to anything

For functions highlighted in pink color, you can first click on fx [blue button]

And search for any function

Like guid(), rand(min, max)



Every time you run the app it will be logged

Identifier	Status	Start time (Local Time)	Duration	Static Results
08584261350062403146371970636CU06	Succeeded	4/6/2026, 4:07:59 PM	470 Milliseconds	
08584261350459200811707656186CU03	Failed	4/6/2026, 4:07:19 PM	179 Milliseconds	
08584261351587193847875258252CU12	Succeeded	4/6/2026, 4:05:26 PM	175 Milliseconds	
08584261352215151575012684678CU21	Succeeded	4/6/2026, 4:04:23 PM	329 Milliseconds	

You might get error while running because of not matching JSON syntax, or entering wrong credentials

Now we need to make a subscription

But it needs to have endpoint

We will use a webhook use its endpoint for subscription

Home › Create a resource

Create Logic App (Multi-tenant) ···

Basics Tags Review + create

Create a logic app, which lets you group workflows as a logical unit for easier management, deployment and sharing of resources. Workflows let you connect your business-critical apps and services with Azure Logic Apps, automating your workflows without writing a single line of code.

Project Details

Select a subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Subscription * — Azure for Students

Resource Group * — event-grid-demo

Create new

Instance Details

Logic App name * — webhook-demo

Region * — Central India

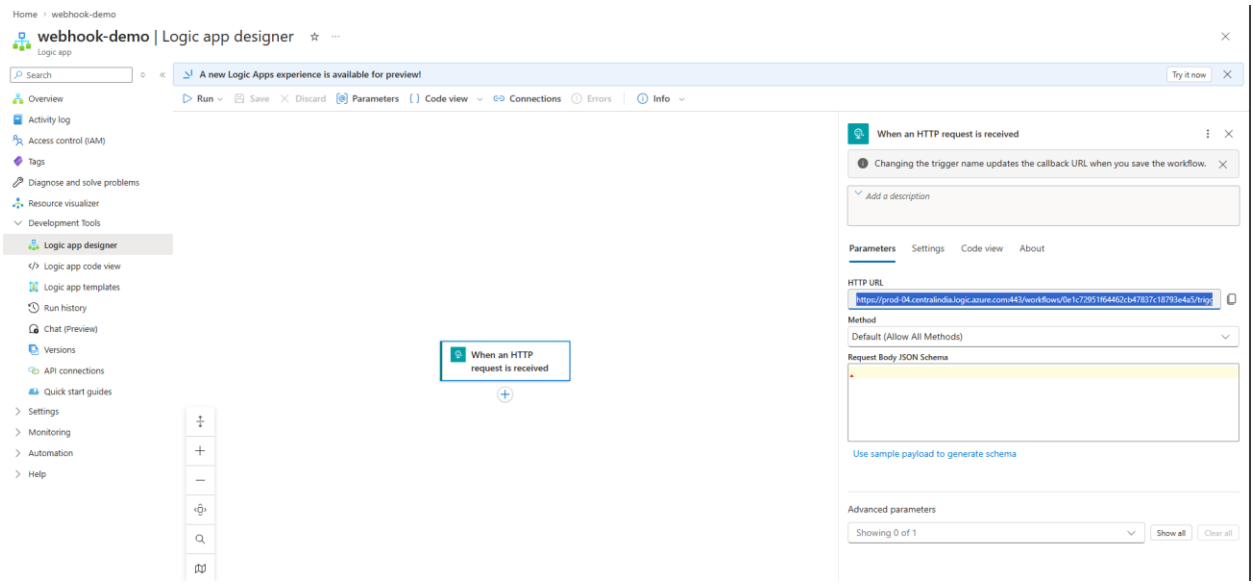
Enable log analytics * — Yes / No

There are no log analytics workspace resources in the selected subscription. In order to enable log analytics, either create a new log analytics workspace resource or switch to a subscription which already has one.

Workflow Type *

- **Stateful**
- **Conversational Agents (Preview):** Stateful workflows that use AI agents to complete tasks through chat interactions or other agents.
- **Autonomous Agents (Preview):** Stateful workflows that use AI agents to complete tasks and can start from any trigger, such as an event, schedule, or API call.

And make a HTTP trigger



Copy the endpoint provided (it will be used in event-subscription)

Home

new-cars-topic

Event Grid Topic

List the recent events published to this Event Grid Topic.

How do I troub

Search

- Overview
- Activity log
- Access control (IAM)
- Tags
- Resource visualizer
- Settings
  - Access keys
  - Networking

Event Subscription | Delete | Refresh | Give feedback

Essentials

Resource group (move)	: event-grid-demo
Status	: Active
