Name: Sumit Chauhan

Dept: Data Engineering

Module: Azure Data Factory

Task:

Create ADF in azure portal and make a pipeline

yt video: [Azure Data Factory Tutorial | Introduction to ETL in Azure]

Search for data factory in create resources and click on **Data Factory**

Estimated cost per month
5.60 USD

Terms

By clicking "Create", I (a) agree to the legal terms and privacy statement(s) associated with the Marketplace offering(s) listed above; (b) authorize Microsoft to bill my current payment method for the fees associated with the offering(s), with the same billing frequency as my Azure subscription; and (c) agree that Microsoft may share my contact, usage and transactional information with the provider(s) of the offering(s) for support, billing and other transactional activities. Microsoft does not provide rights for third-party offerings. For additional details see Azure Marketplace Terms.

Basics

Subscription	Azure for Students
Resource group	rsg-adf-demo
Region	Central India
Database name	az-sql-db-for-adf
Server	(new) az-sql-server-for-adf
Authentication method	Microsoft Entra-only authentication
Microsoft Entra Admin	sqladmin@Chauhansk1712gmail.onmicrosoft.com
Compute + storage	Basic: 2 GB storage
Backup storage redundancy	Geo-redundant backup storage

Cost summary

Basic (Basic)	
Cost per **DTU** (in USD)	1.12
DTUs selected	x 5
ESTIMATED COST / MONTH	5.60 USD

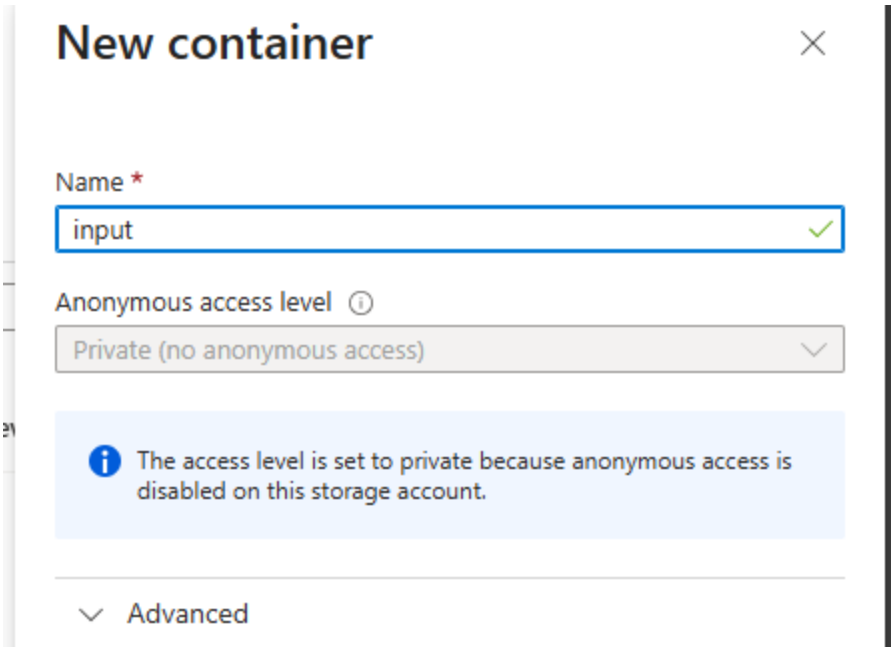
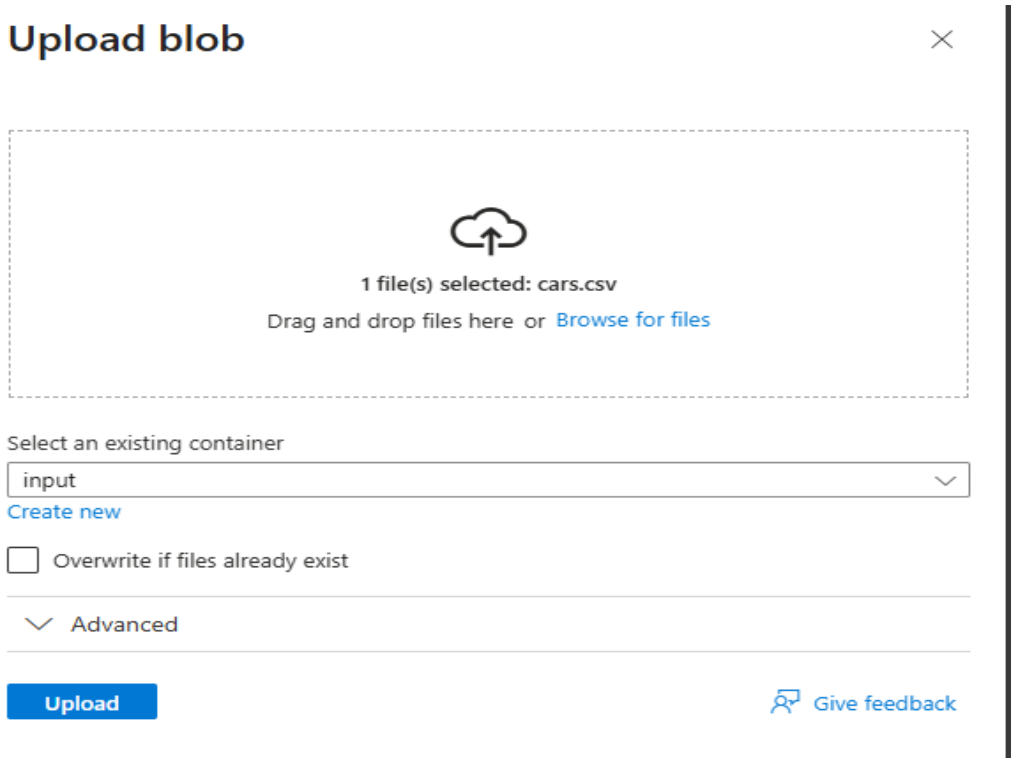
Basics

Subscription	Azure for Students
Resource group	rsg-adf-demo
Location	Central India
Storage account name	saadfdemo01
Preferred storage type	Azure Blob Storage or Azure Data Lake Storage Gen 2
Primary workload	
Performance	Standard
Replication	Read-access geo-redundant storage (RA-GRS)

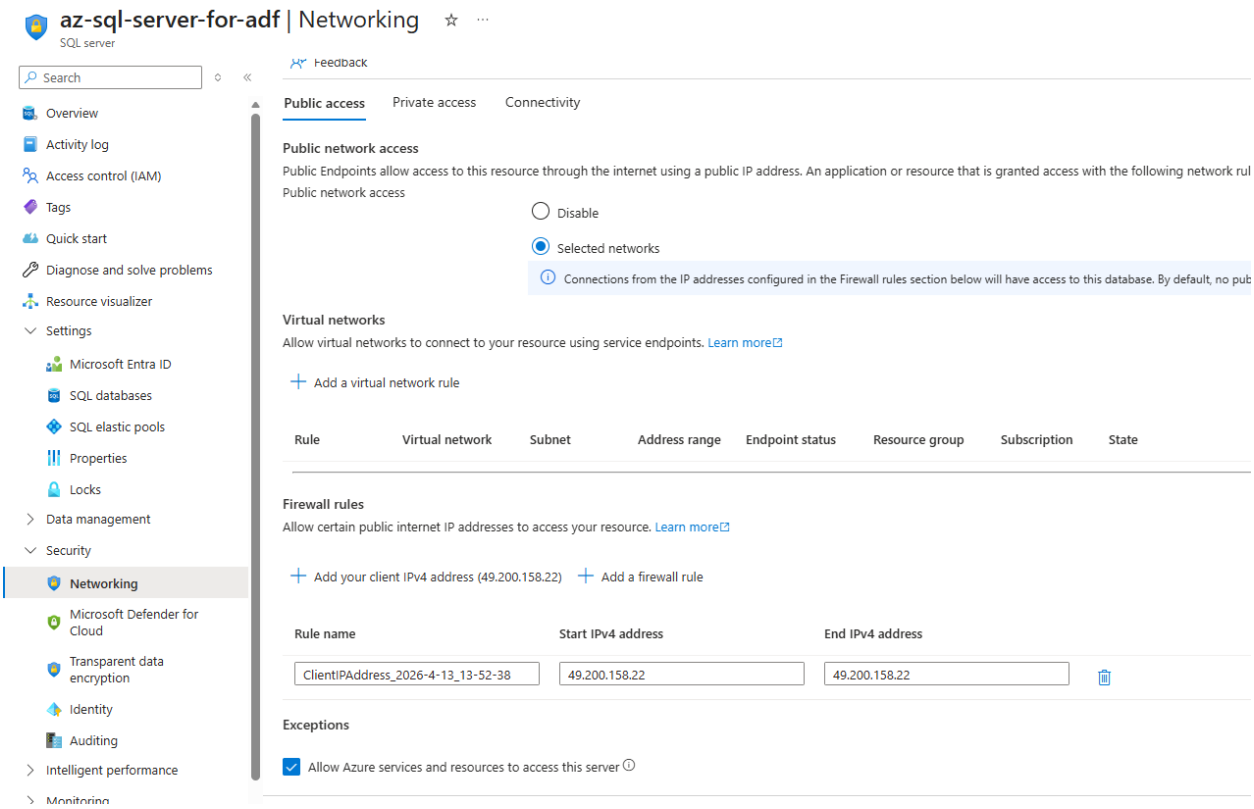
Create a container



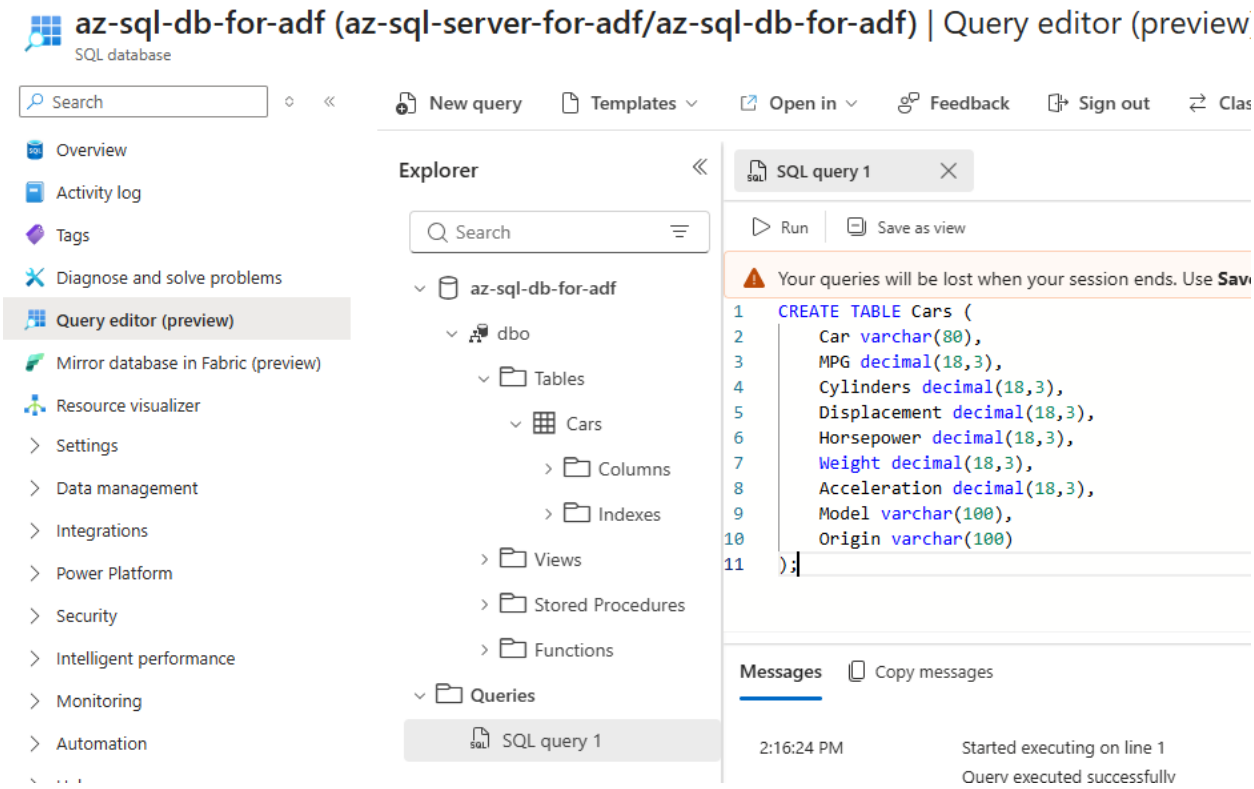
Upload some data:



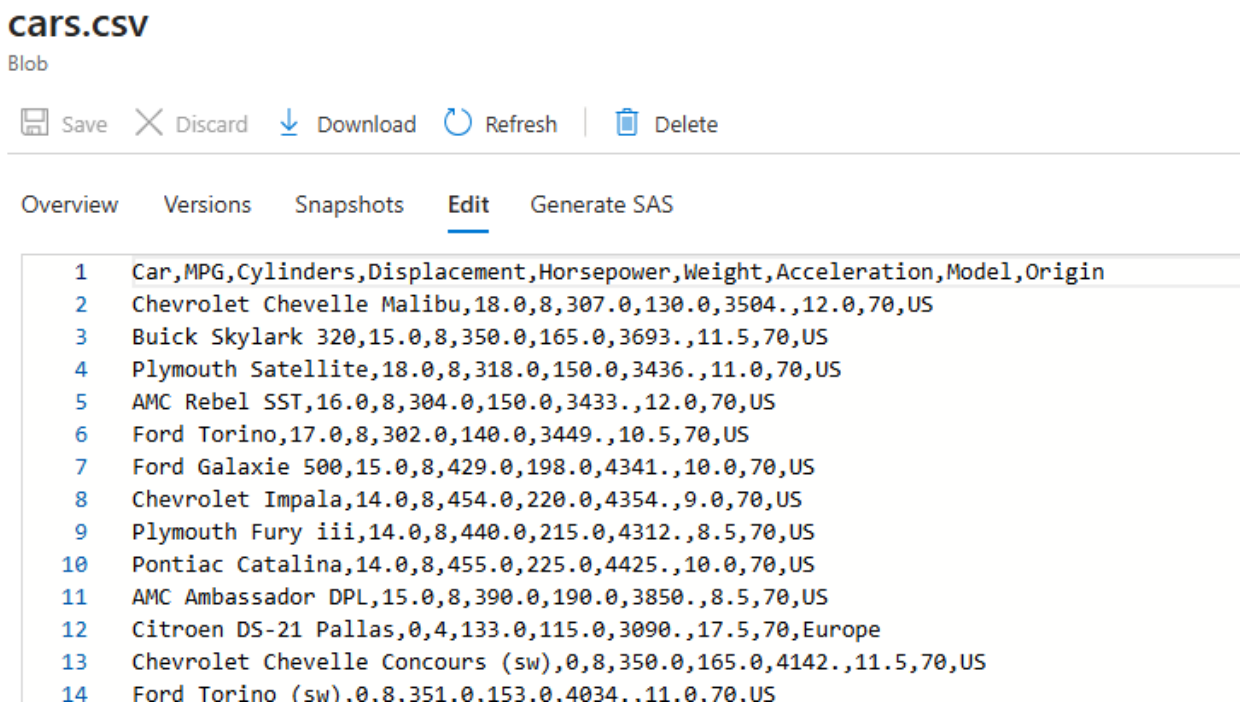
Make sure to allow public access to server (for learning purpose):-



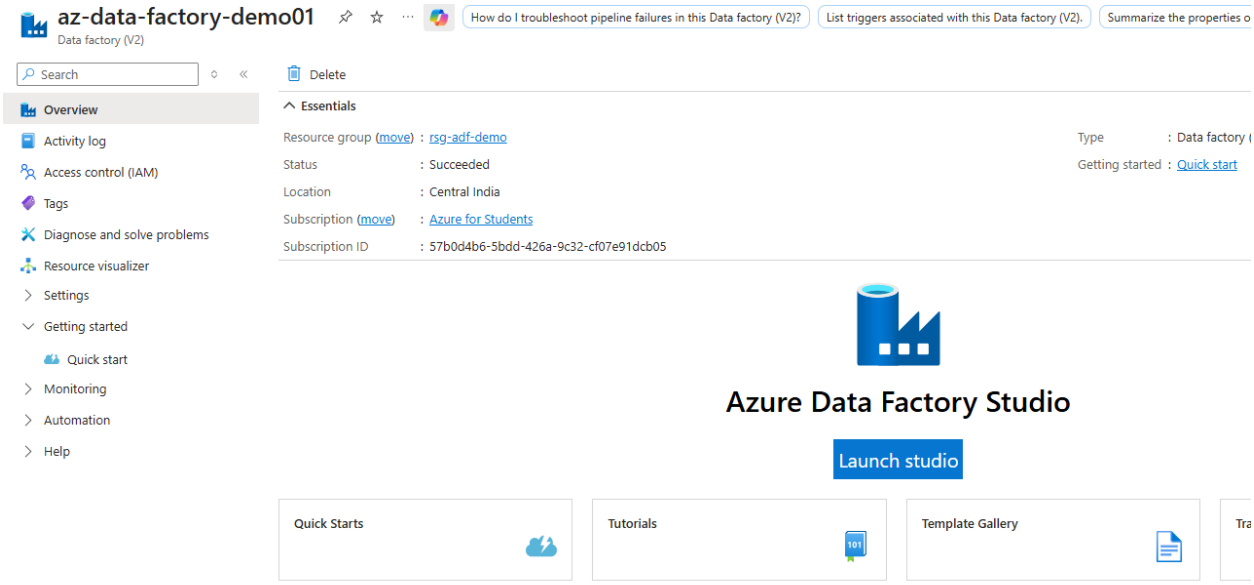
In your database > open query editor > add a query for cars table



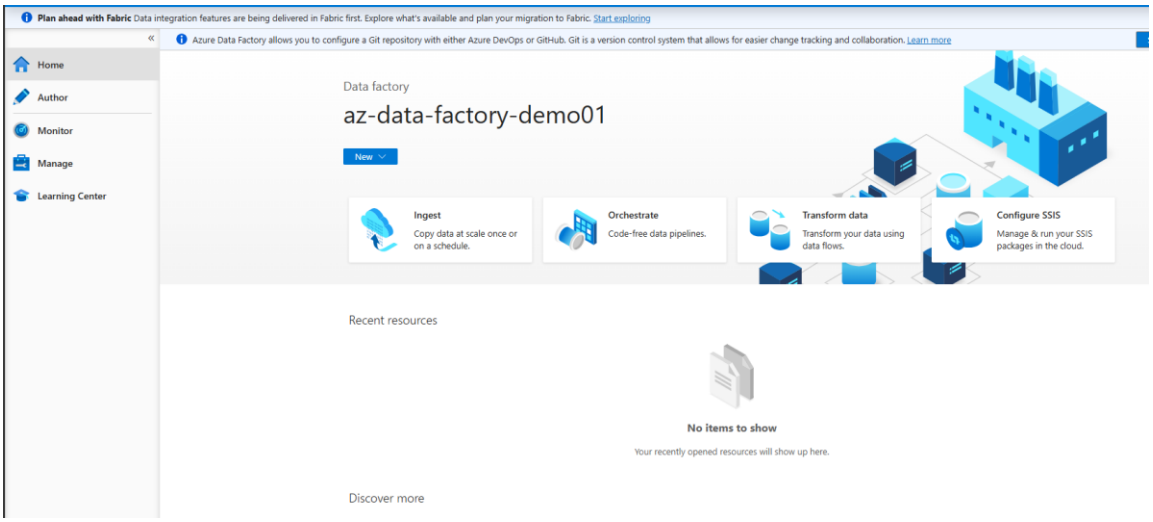
Add a cars.csv file in blob storage in storage account



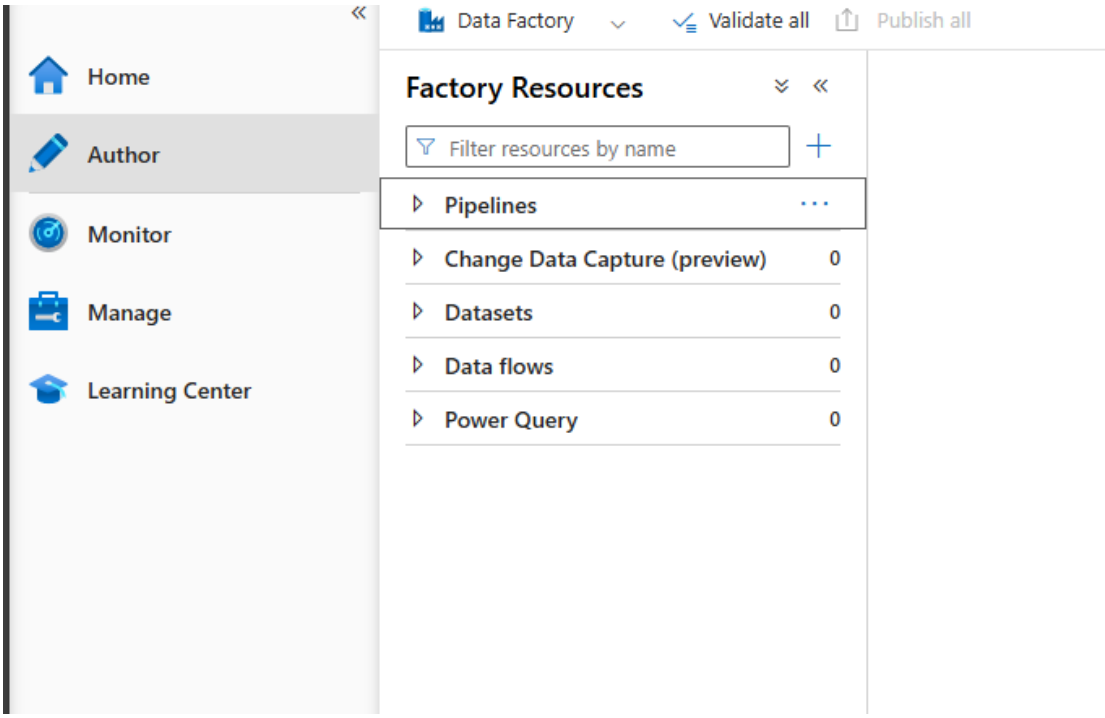
Open your ADF in azure portal:



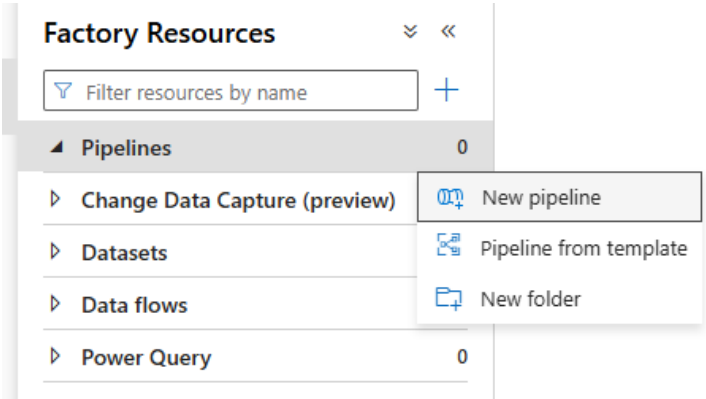
Click on Launch Studio:-



Go to author's tab on left side bar:

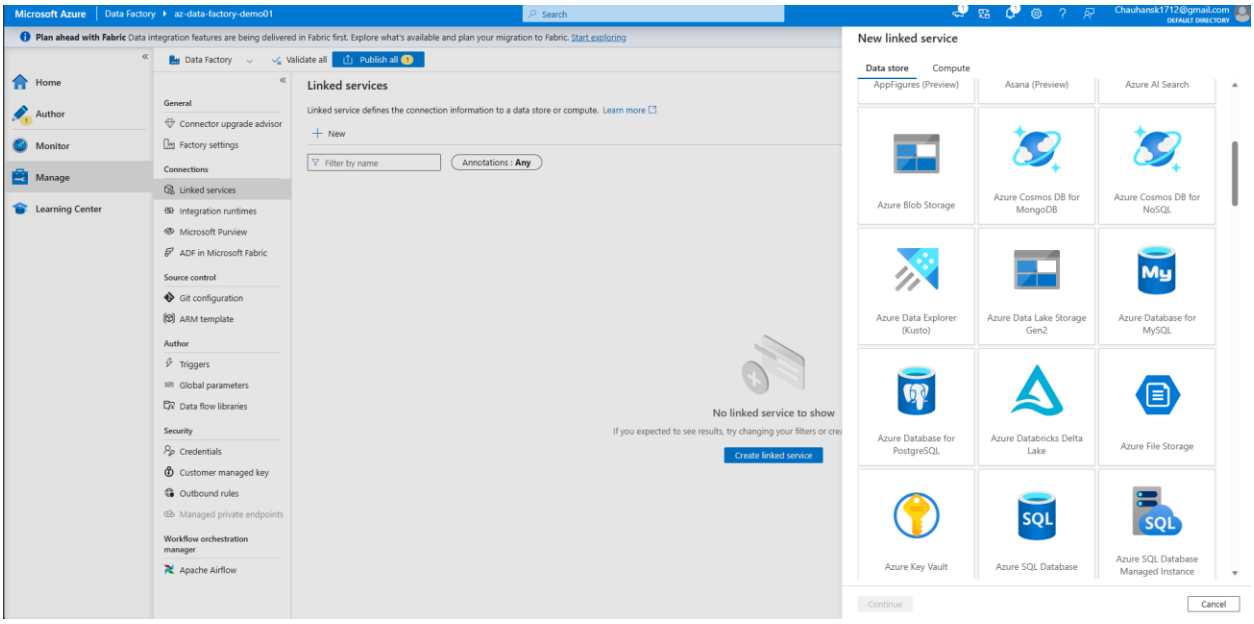


Create a new pipeline:



To create a linked service, go to manage tab (in left side bar)

Click on new link service:



Keep authentication as Access key (for now)

And test connection

Now create a dataset:

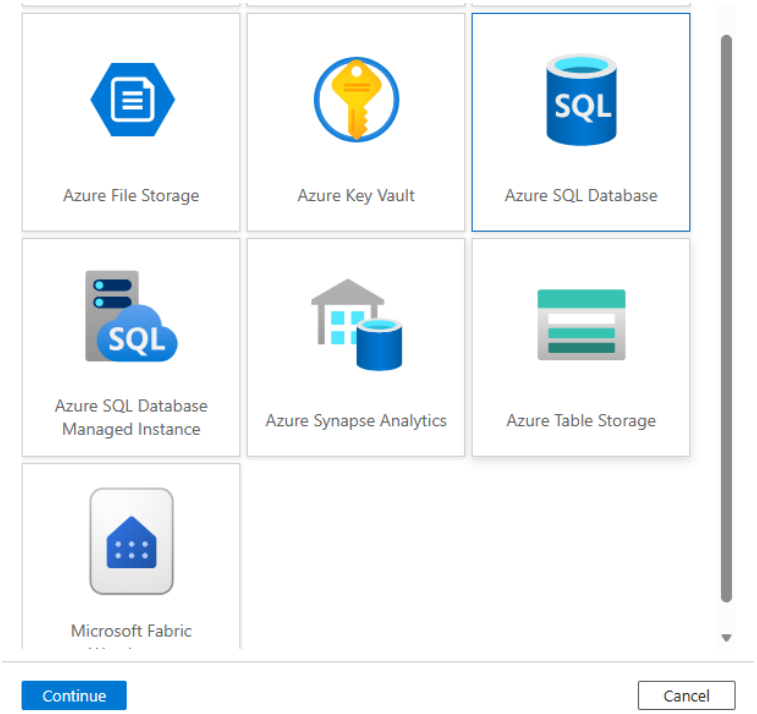
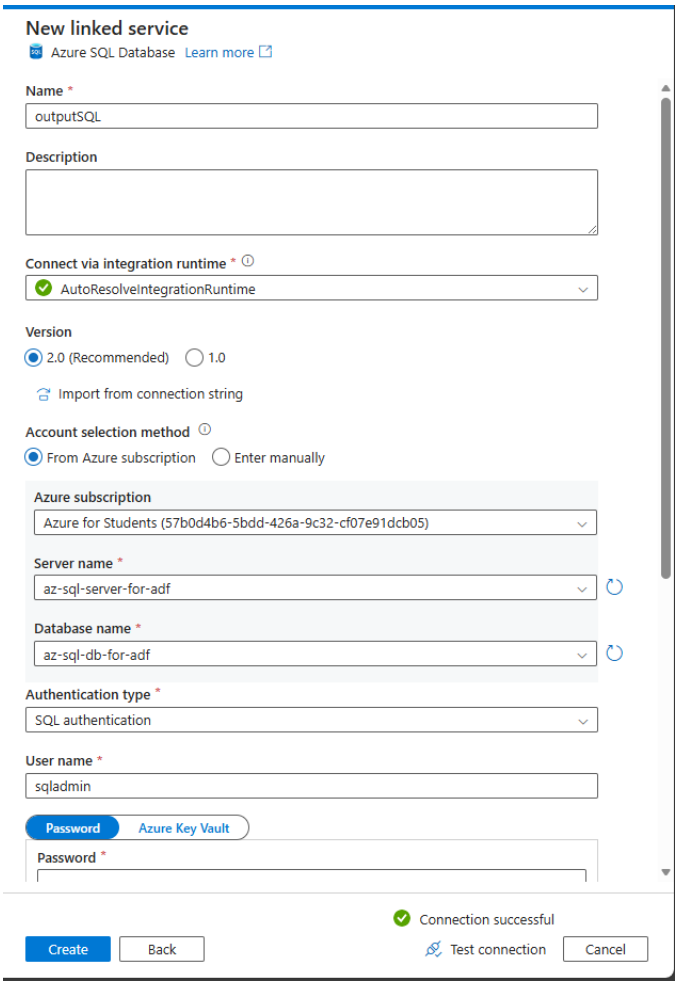
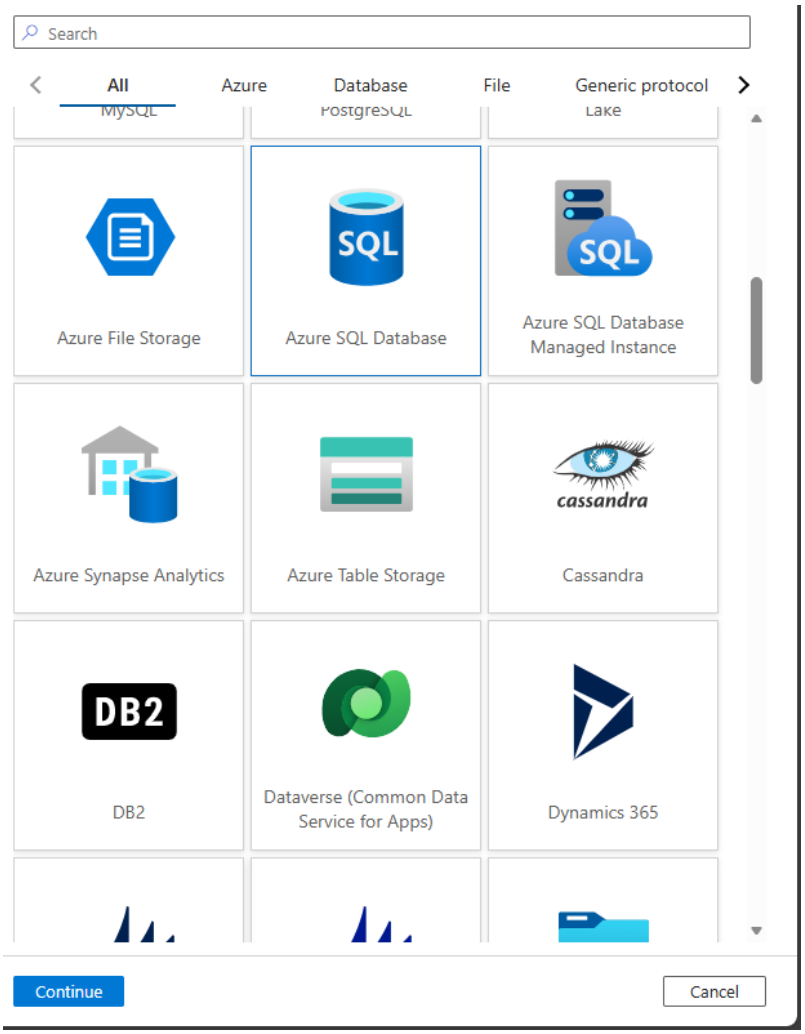
Add another link service for azure sql database





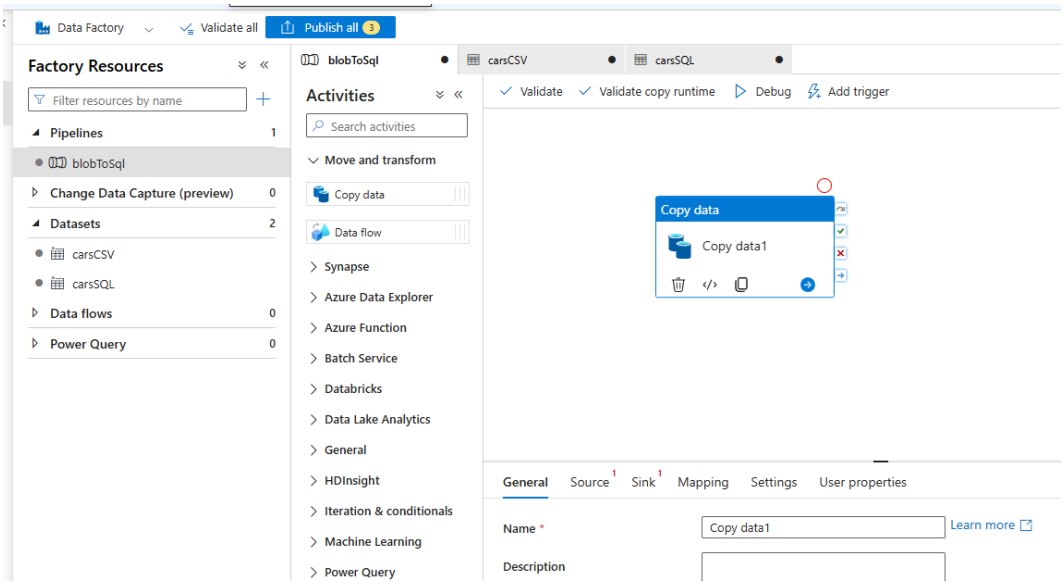
Add necessary details:

Now add a dataset:



Set properties:

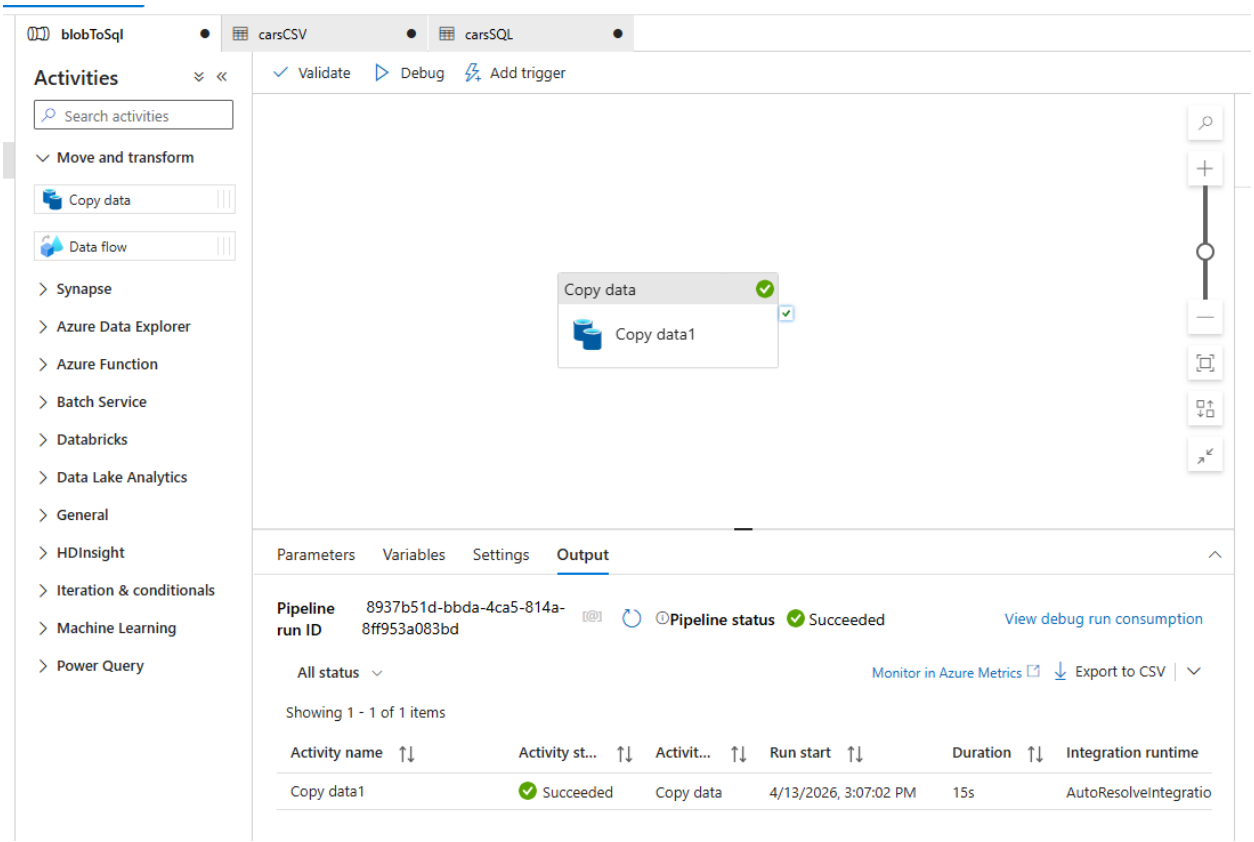
Add action:



You need to drag & drop the desired action

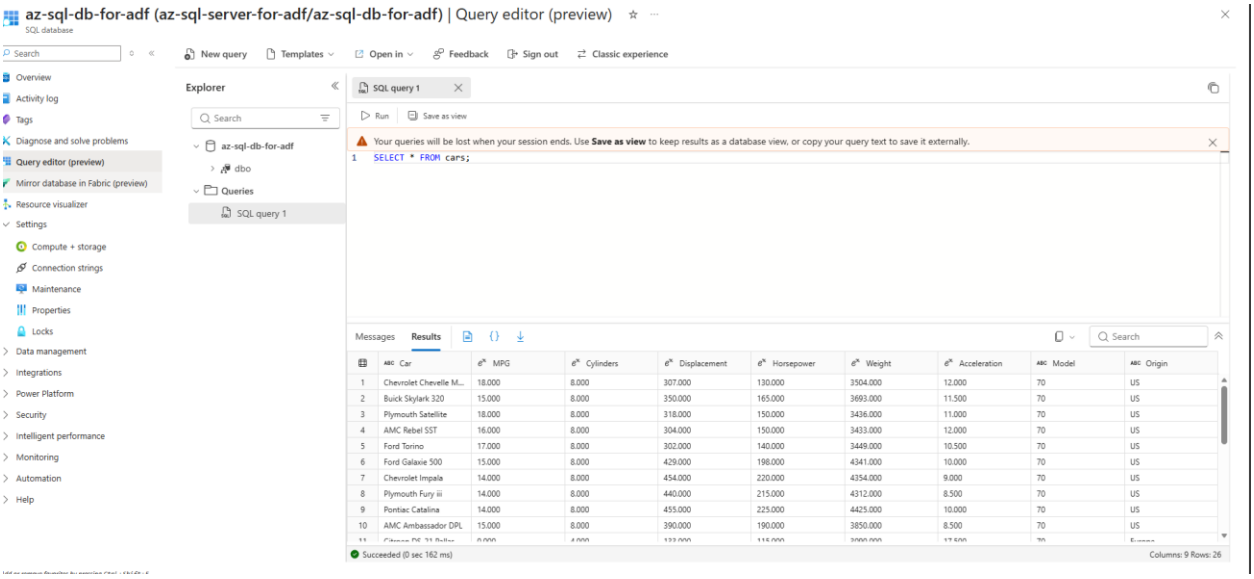
Add source and sink datasets

Click on debug to check if the workflow is fine or there is some error



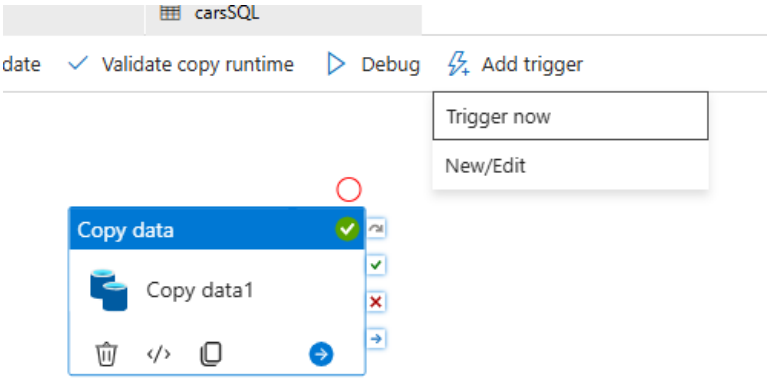
Verify whether the data is copied to sql database or not

Using its query editor



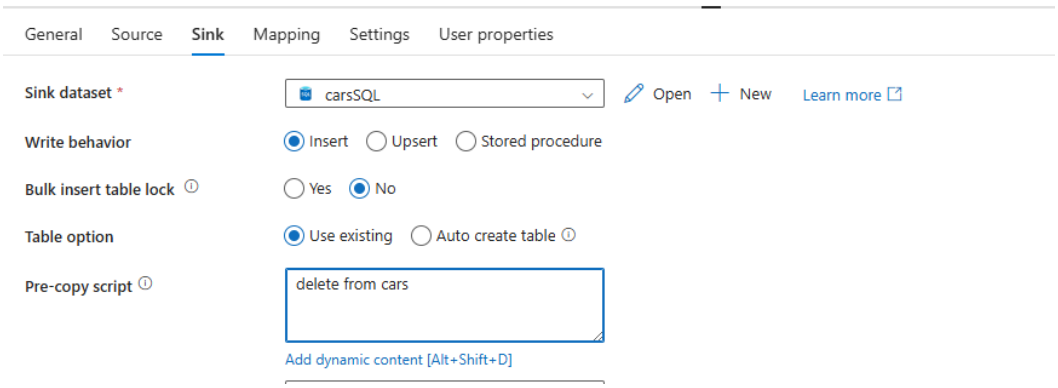
You can publish the changes in your data factory

After publishing the pipeline, you can add a trigger



When the pipeline is triggered, whole blob is added to sql db (duplicates)

For preventing this for now we can add a pre-script that runs before pipeline starts:



Once you publish the changes, you monitor the progress when the pipeline was triggered and how much time it took to process and many other things:

(in monitors tab)

Pipeline runs

Triggered | Debug | Rerun | Cancel options | Refresh | Edit columns | List | Gantt

Filter by run ID or name | Chennai, Kolkata, Mu... : **Last 24 hours** | Pipeline name : **All** | Status : **All** | Runs : Latest runs | Triggered by : **All** | Copy filt

Add filter

Showing 1 - 3 items

Pipeline name	Run start	Run end	Duration	Triggered by	Status	Run	Parameters
blobToSql	4/13/2026, 3:19:38 PM	4/13/2026, 3:20:01 PM	23s	Manual trigger	Succeeded	Original	
blobToSql	4/13/2026, 3:15:58 PM	4/13/2026, 3:16:19 PM	21s	Manual trigger	Succeeded	Original	
blobToSql	4/13/2026, 3:15:07 PM	4/13/2026, 3:15:30 PM	24s	Manual trigger	Succeeded	Original
